# ASCAT Winds in NOAA Operations

North Atlantic and Pacific Daily Ocean Coverage

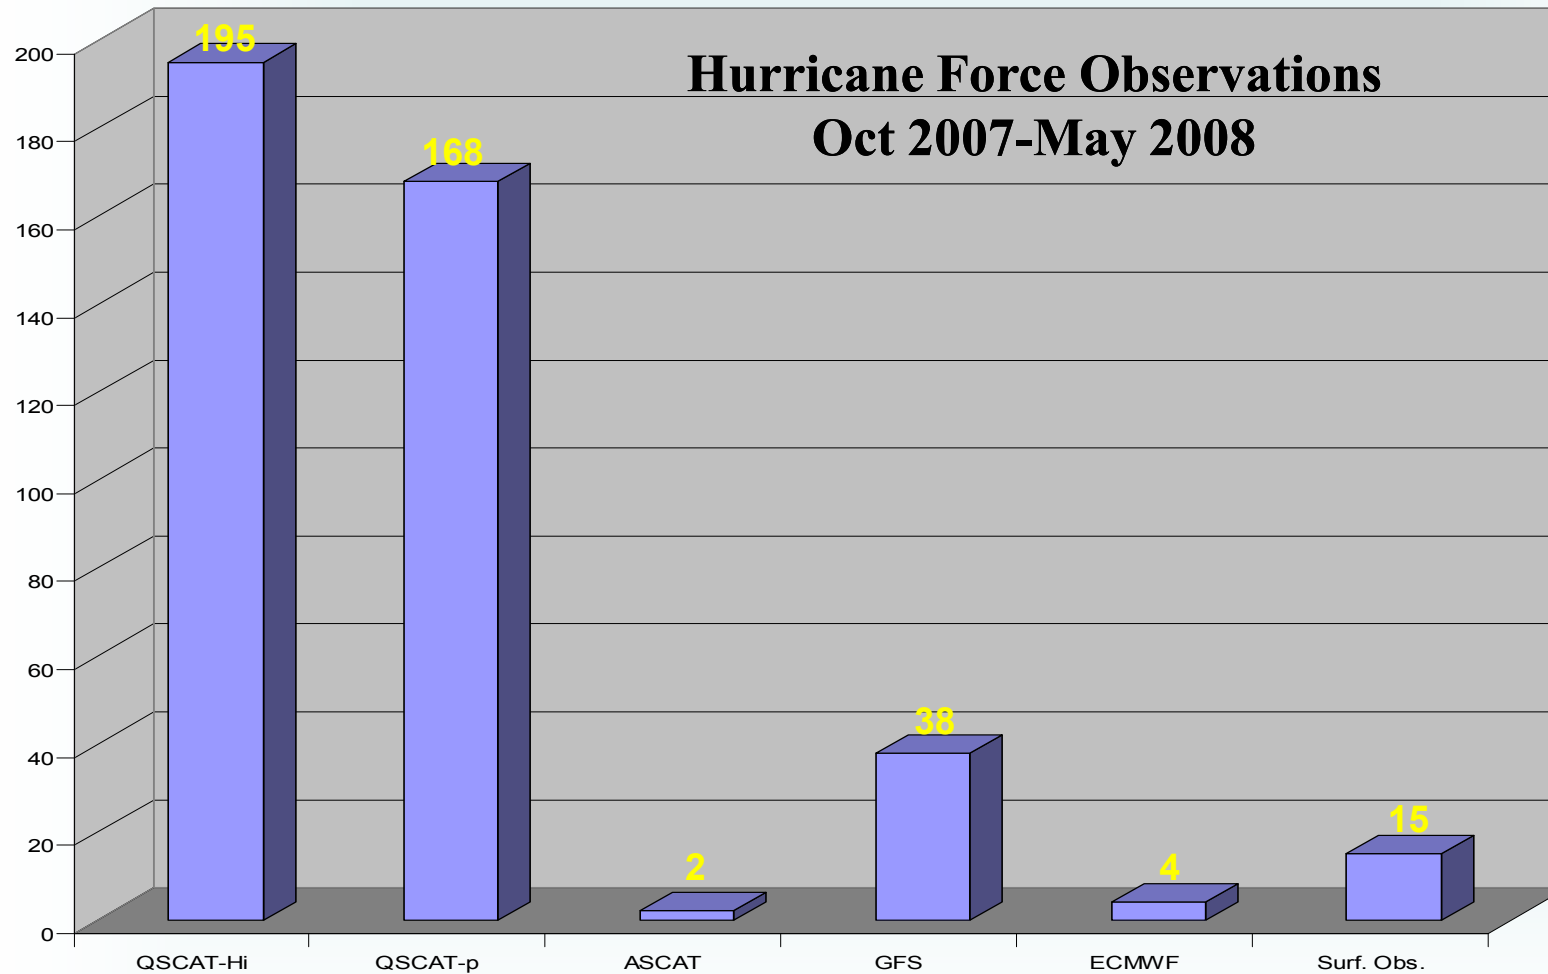

- *ASCAT provides a new, additional source of OSVW data in the large and mostly data void ocean regions within OPC and TPC's areas of responsibility (AOR)*
- *Extremely useful in rainy regions when QuikSCAT retrievals are questionable*
- *In low to moderate wind speed regimes two scatterometers have very comparable utility for marine forecasting and warning products*
- *High winds – not many of them – large difference between QuikSCAT and ASCAT*

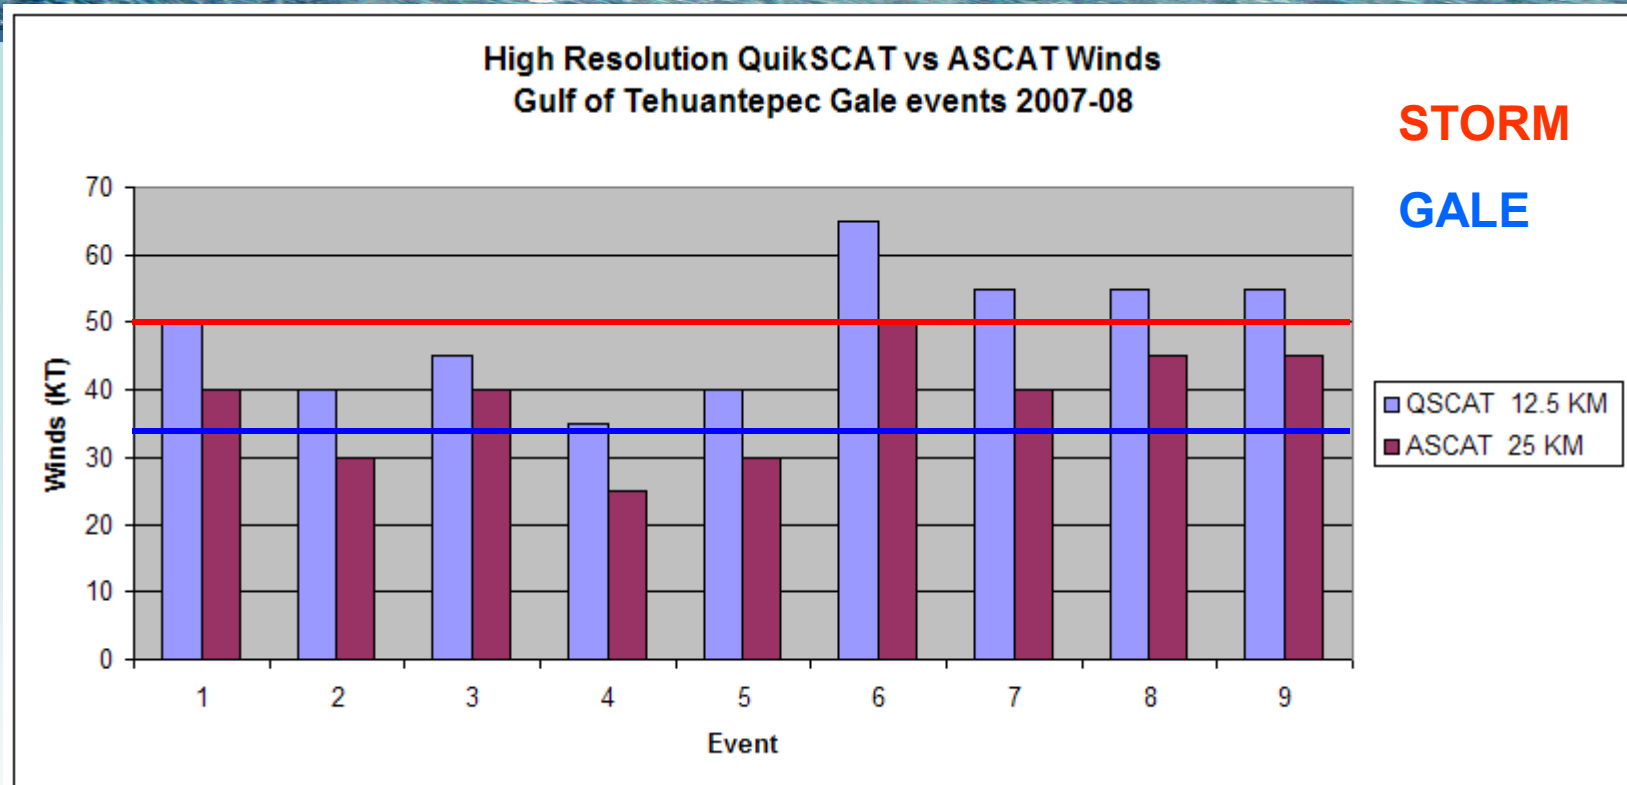

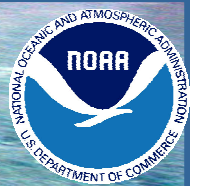

# High Wind Issue

# Utility of ASCAT in HF warnings

Khalil Ahmad NWS/OPC

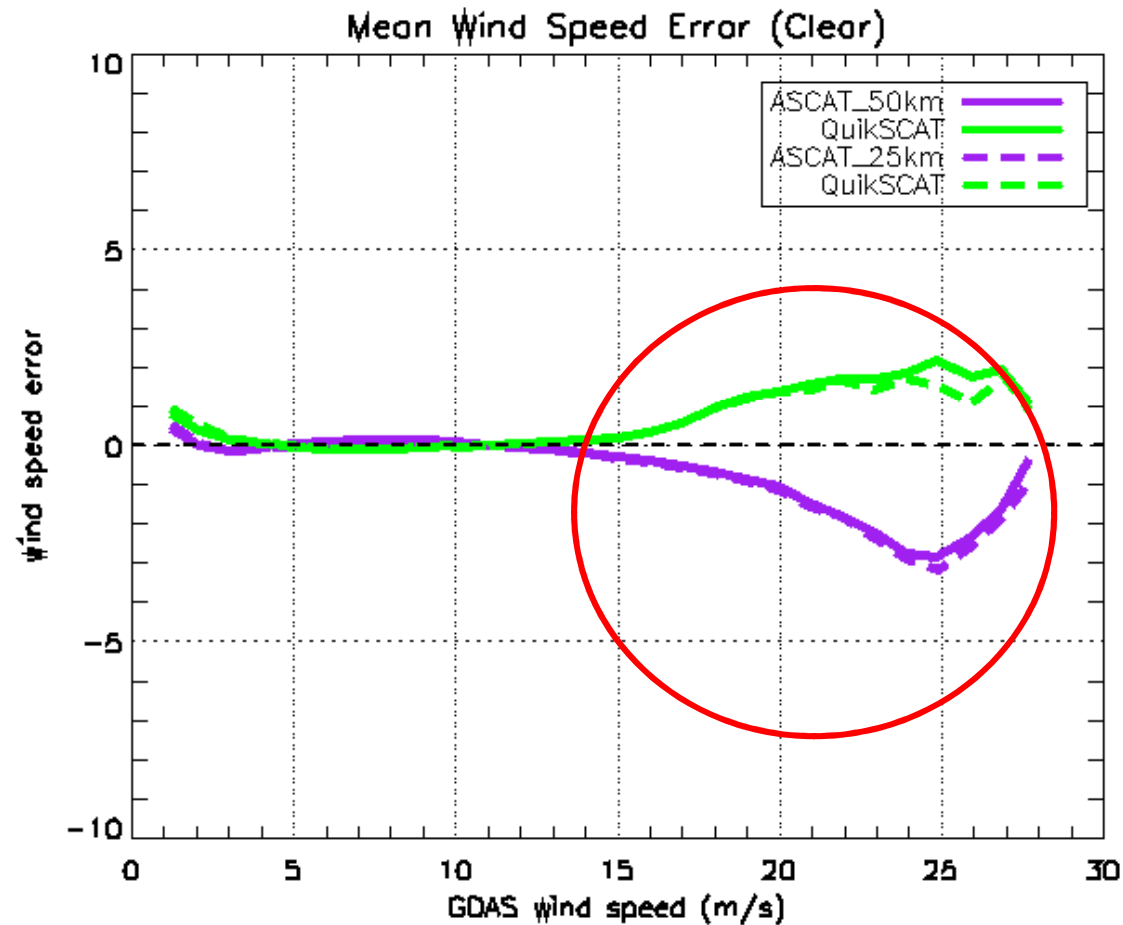

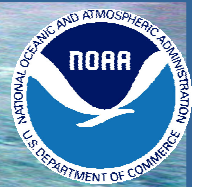

## 12.5 KM QuikSCAT vs 25 (12.5) KM ASCAT Retrievals

QuikSCAT Higher by ONE warning category in 8 out of 9 events

Hugh Cobb NHC/TAFB

# **High Wind Hurricane Aircraft Data and Scatterometer Model Functions**

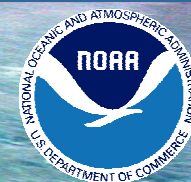

# CMOD5 vs IWRAP C-Band V-Pol Model

$$\sigma_0 = B_0[1+B_1\cos(\varphi)+B_2\cos(2\varphi)]^{1.6}$$

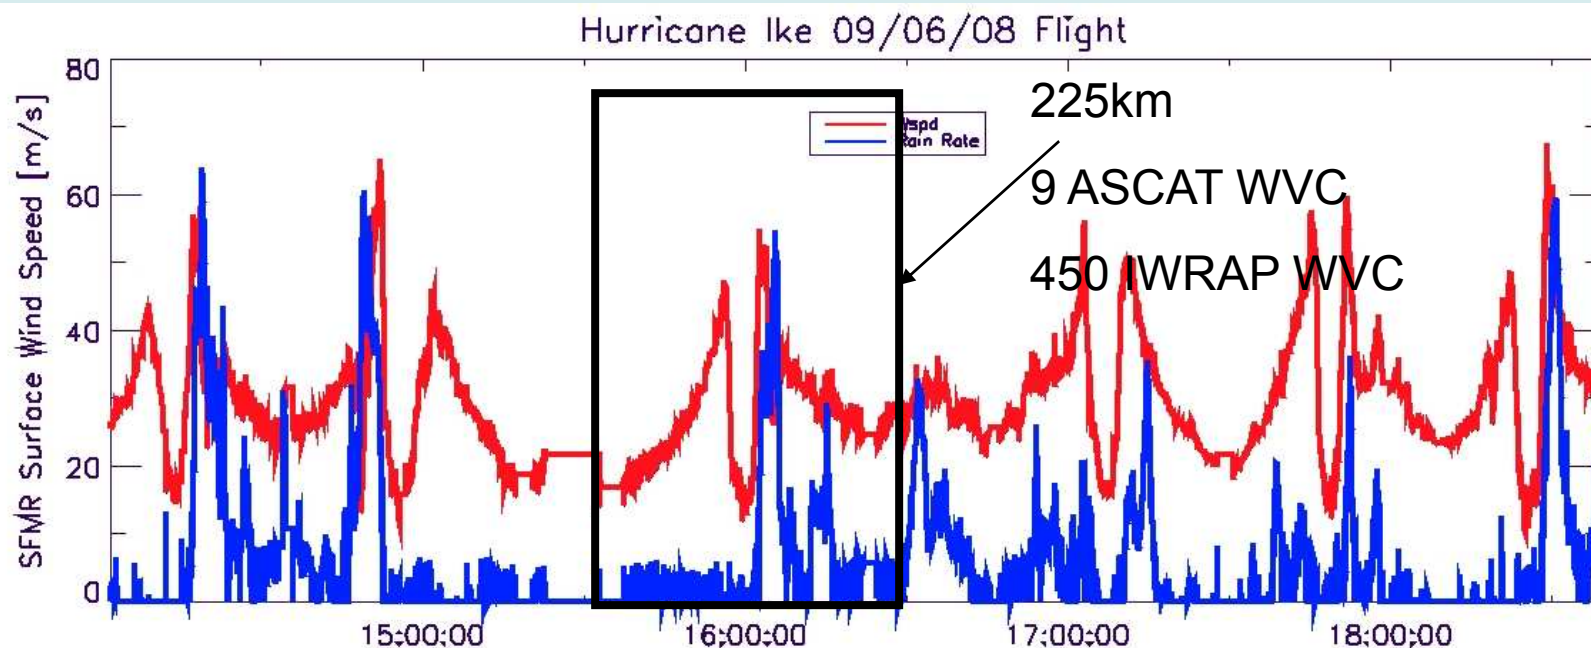

Aircraft Model Function = Satellite Model Function

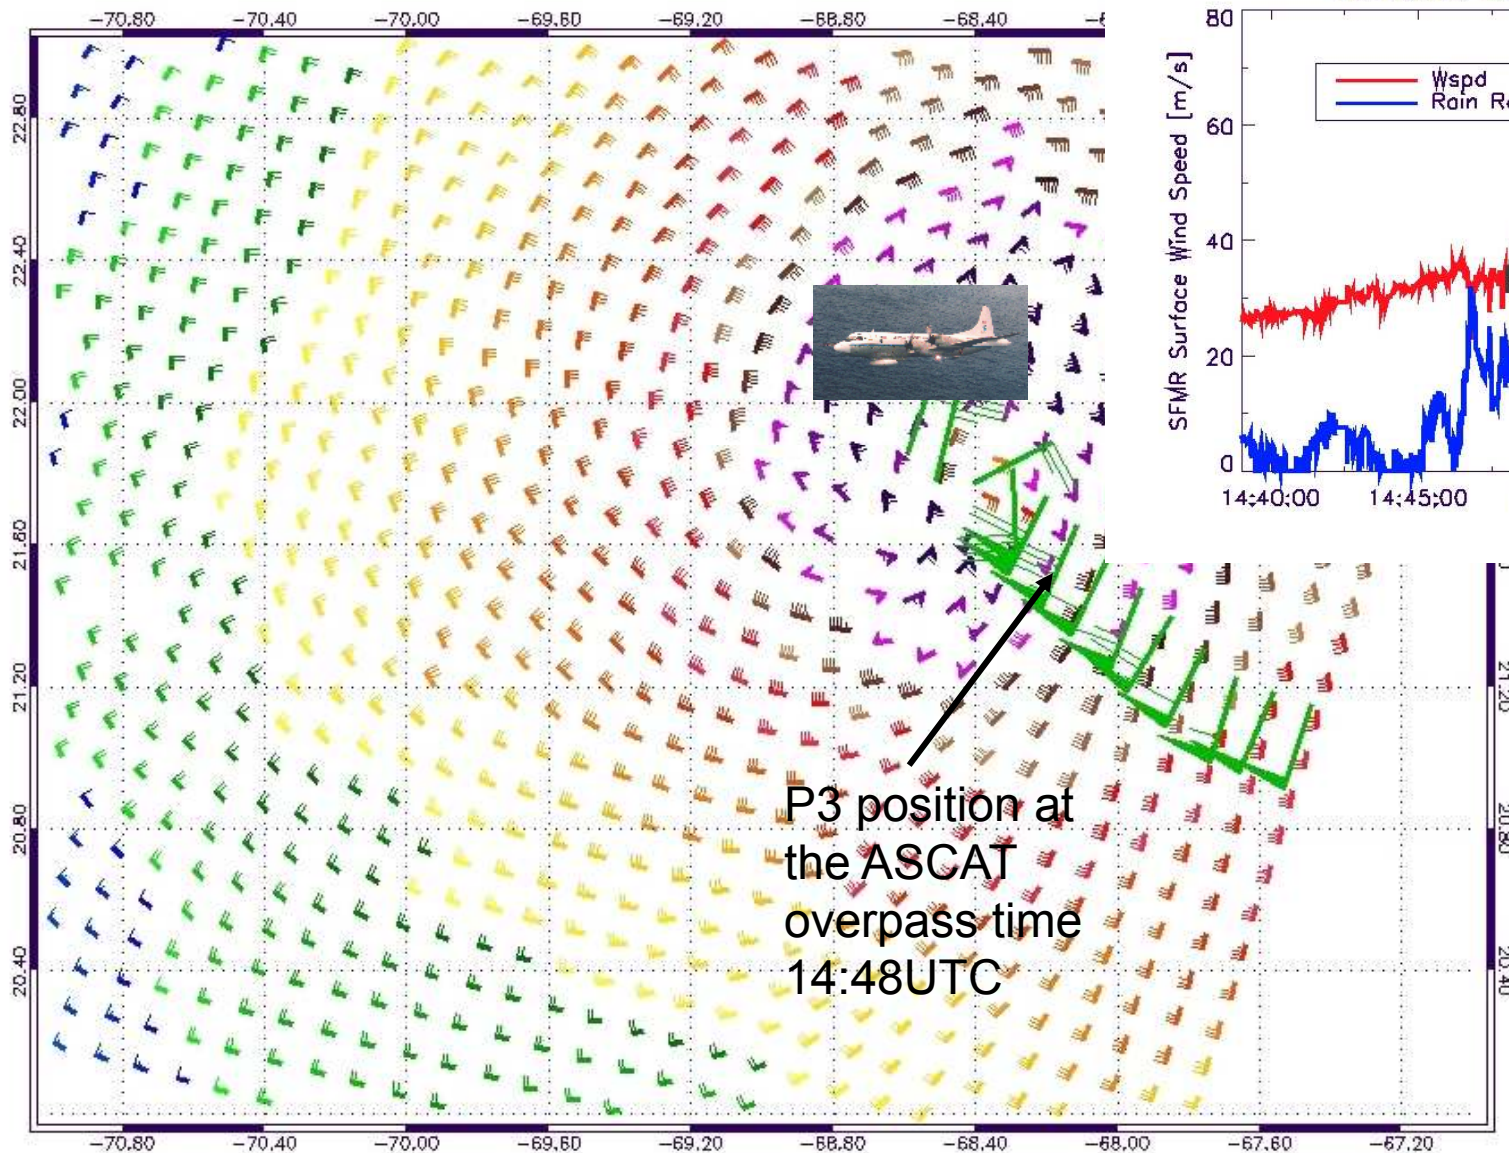

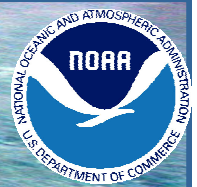

# 2008 Hurricane Season - NOAA P3 Flights

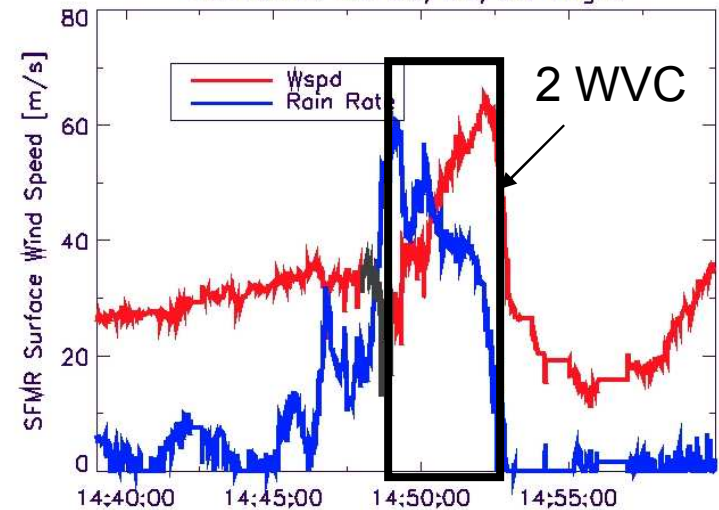

- 3 missions in hurricane Gustav, 1 mission in hurricane Hanna, 6 missions in hurricane Ike and 4 missions in TC Kyle flown during season, sampling wind speeds in the range of 5 to 70 m/s
- The dataset includes GPS dropsondes and collocated radiometer (SFMR) brightness temperatures measurements providing surface wind speed and precipitation estimates.

# Coordinated P3 ASCAT Underflight Hurricane Ike 09/06/08

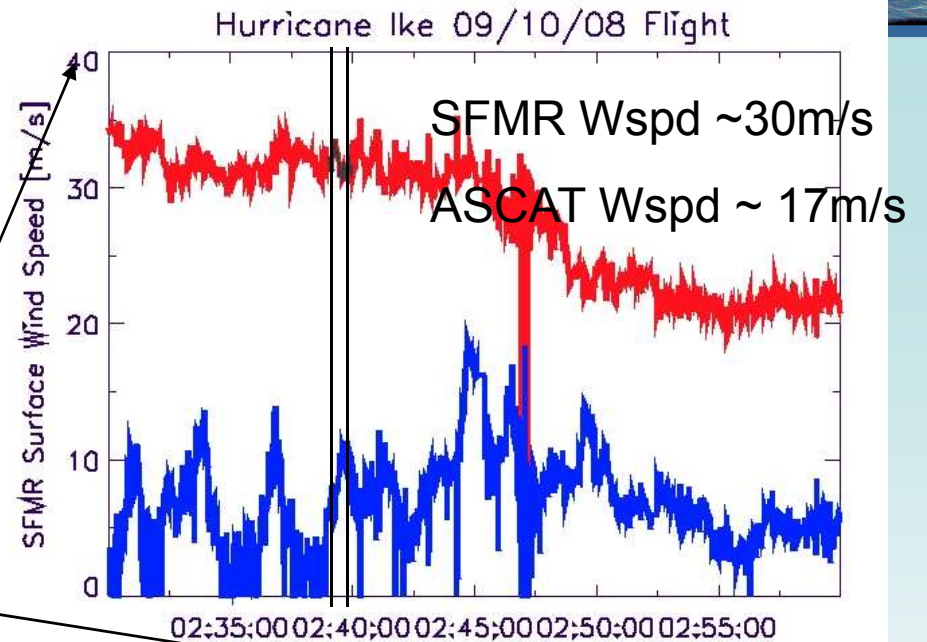

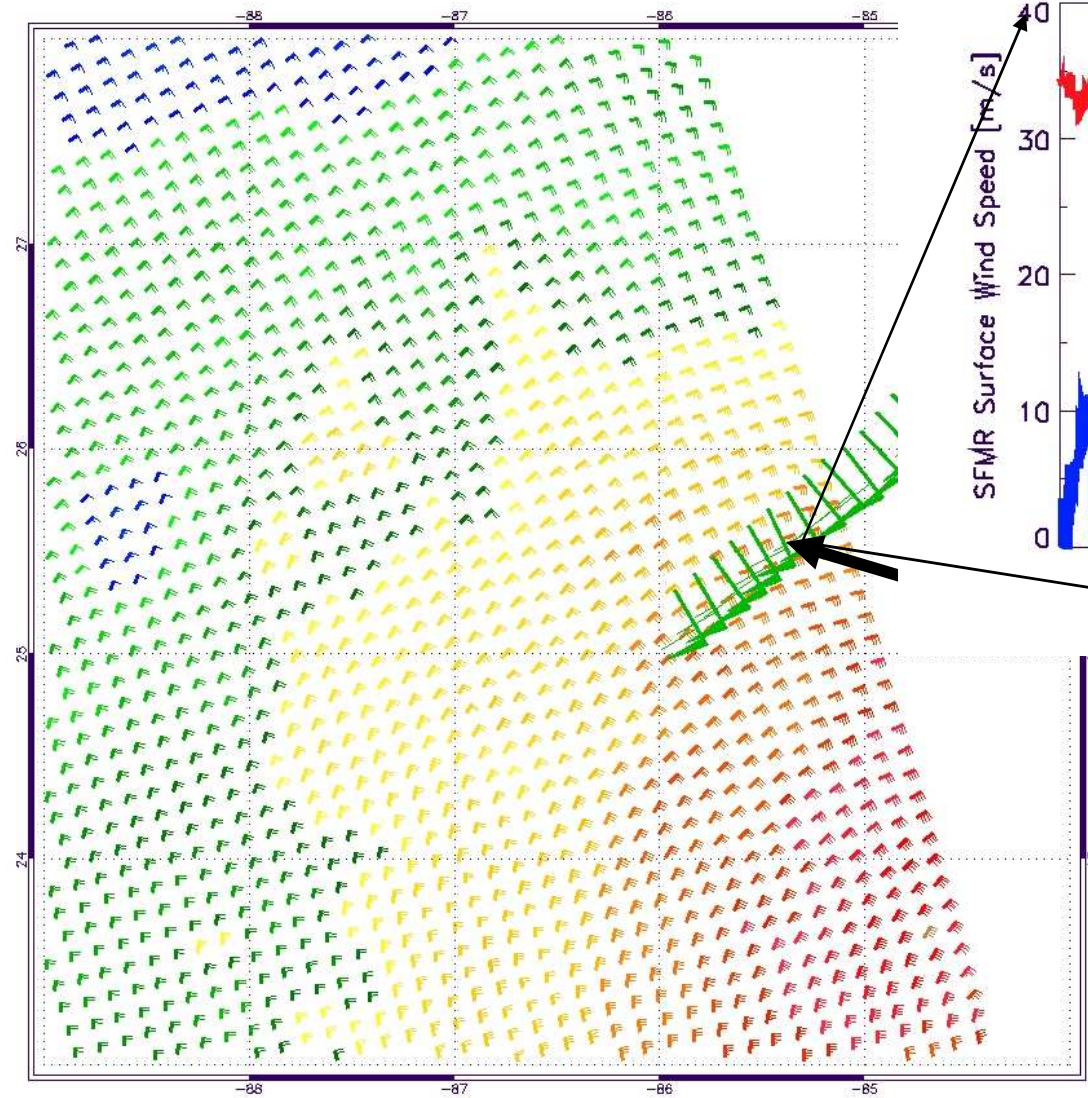

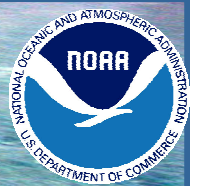

Hurricane Ike 09/06/08 Flight

- Max surface wind measured by sfmr 67.5 m/s
- Max dropsonde wind at 50m 73 m/s
- Max ASCAT wind 35.93 m/s

# Hurricane Ike 09/10/08

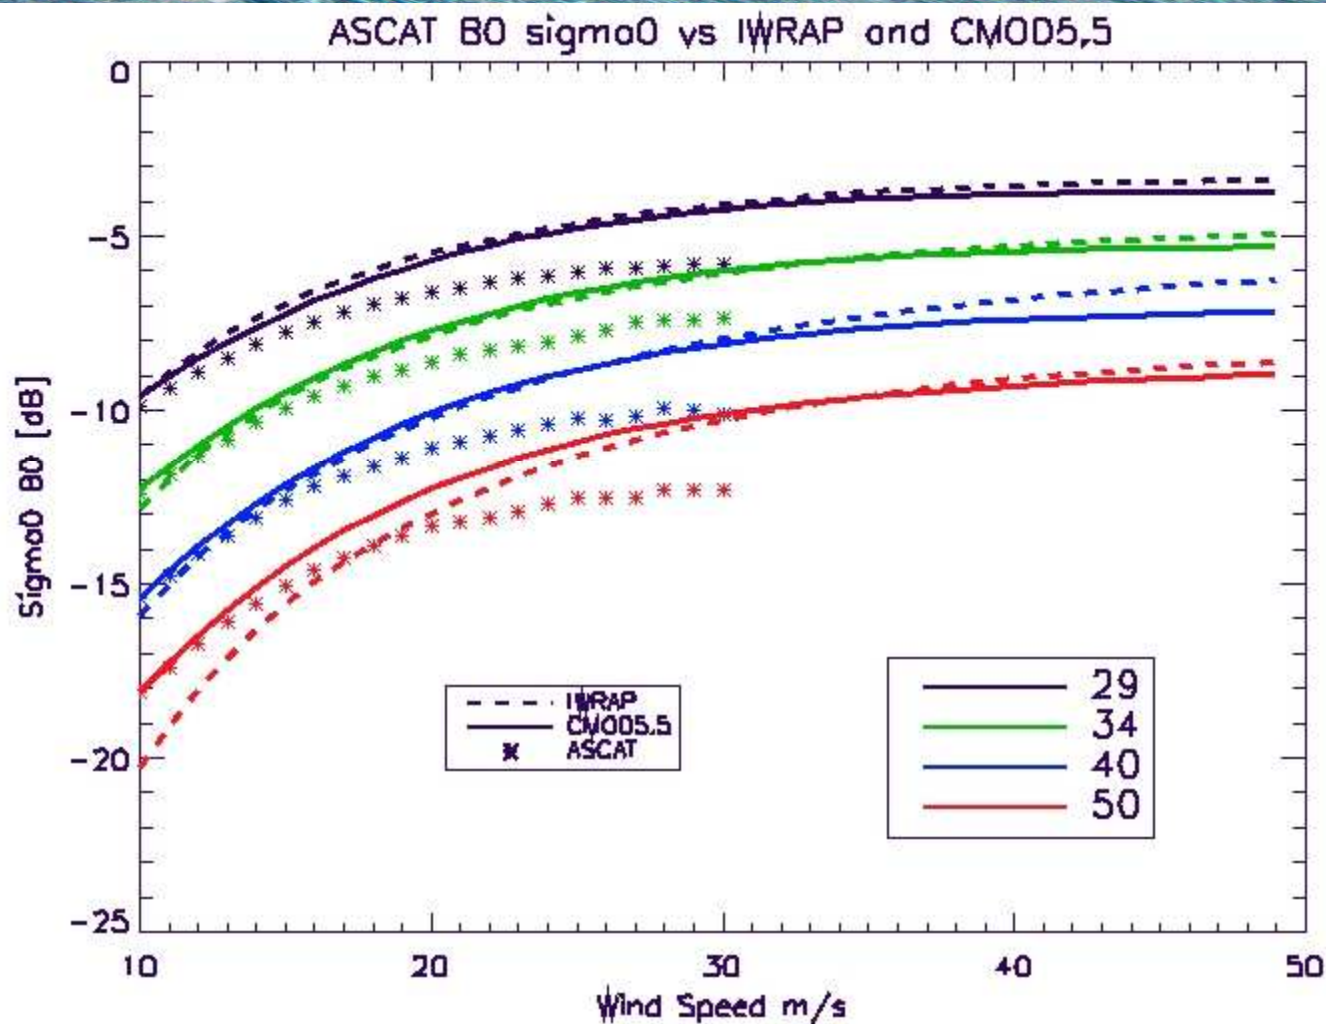

P3 position at  
the ASCAT  
overpass time  
2:39UTC

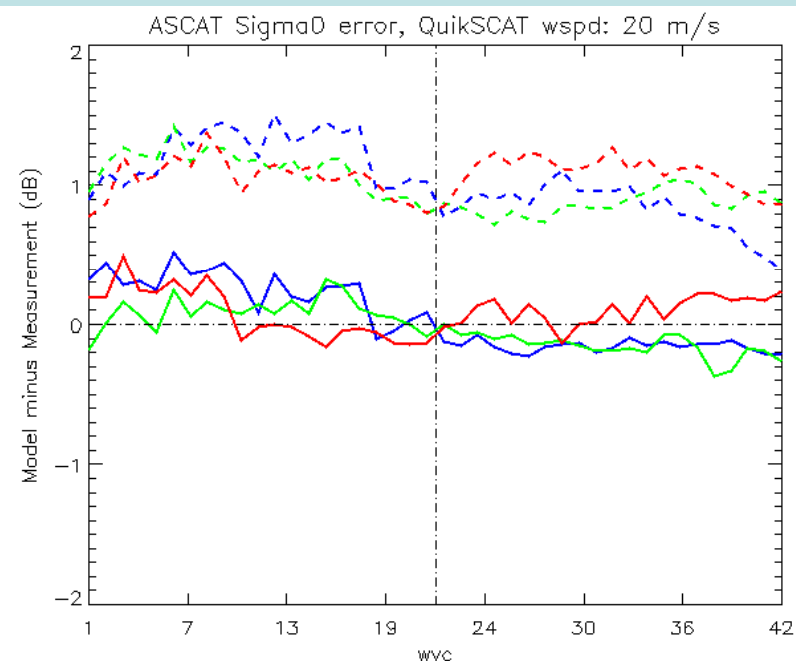

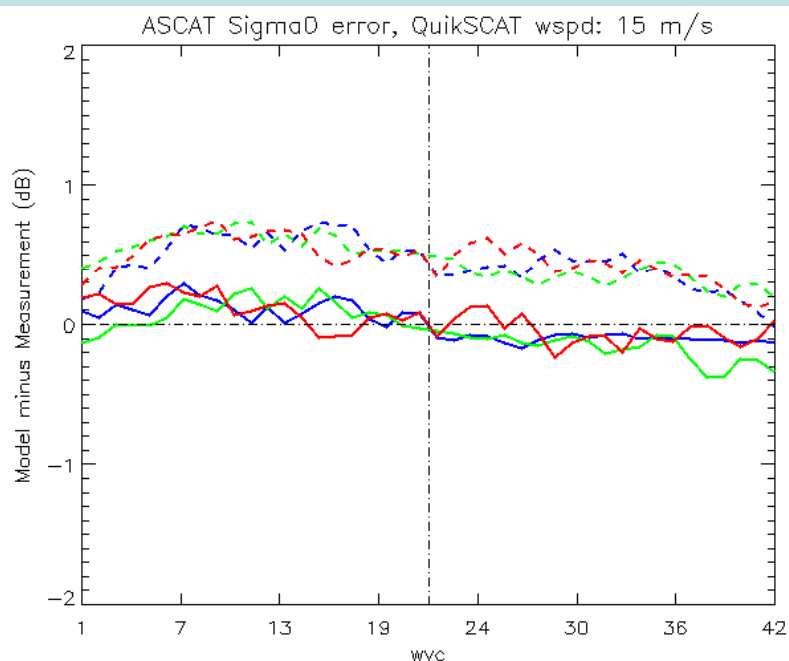

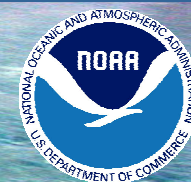

# **ASCAT vs IWRAP Model Function**

# ASCAT vs CMOD5 and IWRAP Model

$$\sigma_0 = B_0 [1 + B_1 \cos(\varphi) + B_2 \cos(2\varphi)]^{1.6}$$

# $\sigma_0^{\text{meas}} - \sigma_0^{\text{mod}}$ Differences

Aircraft Model Function  $\neq$  Satellite Model Function

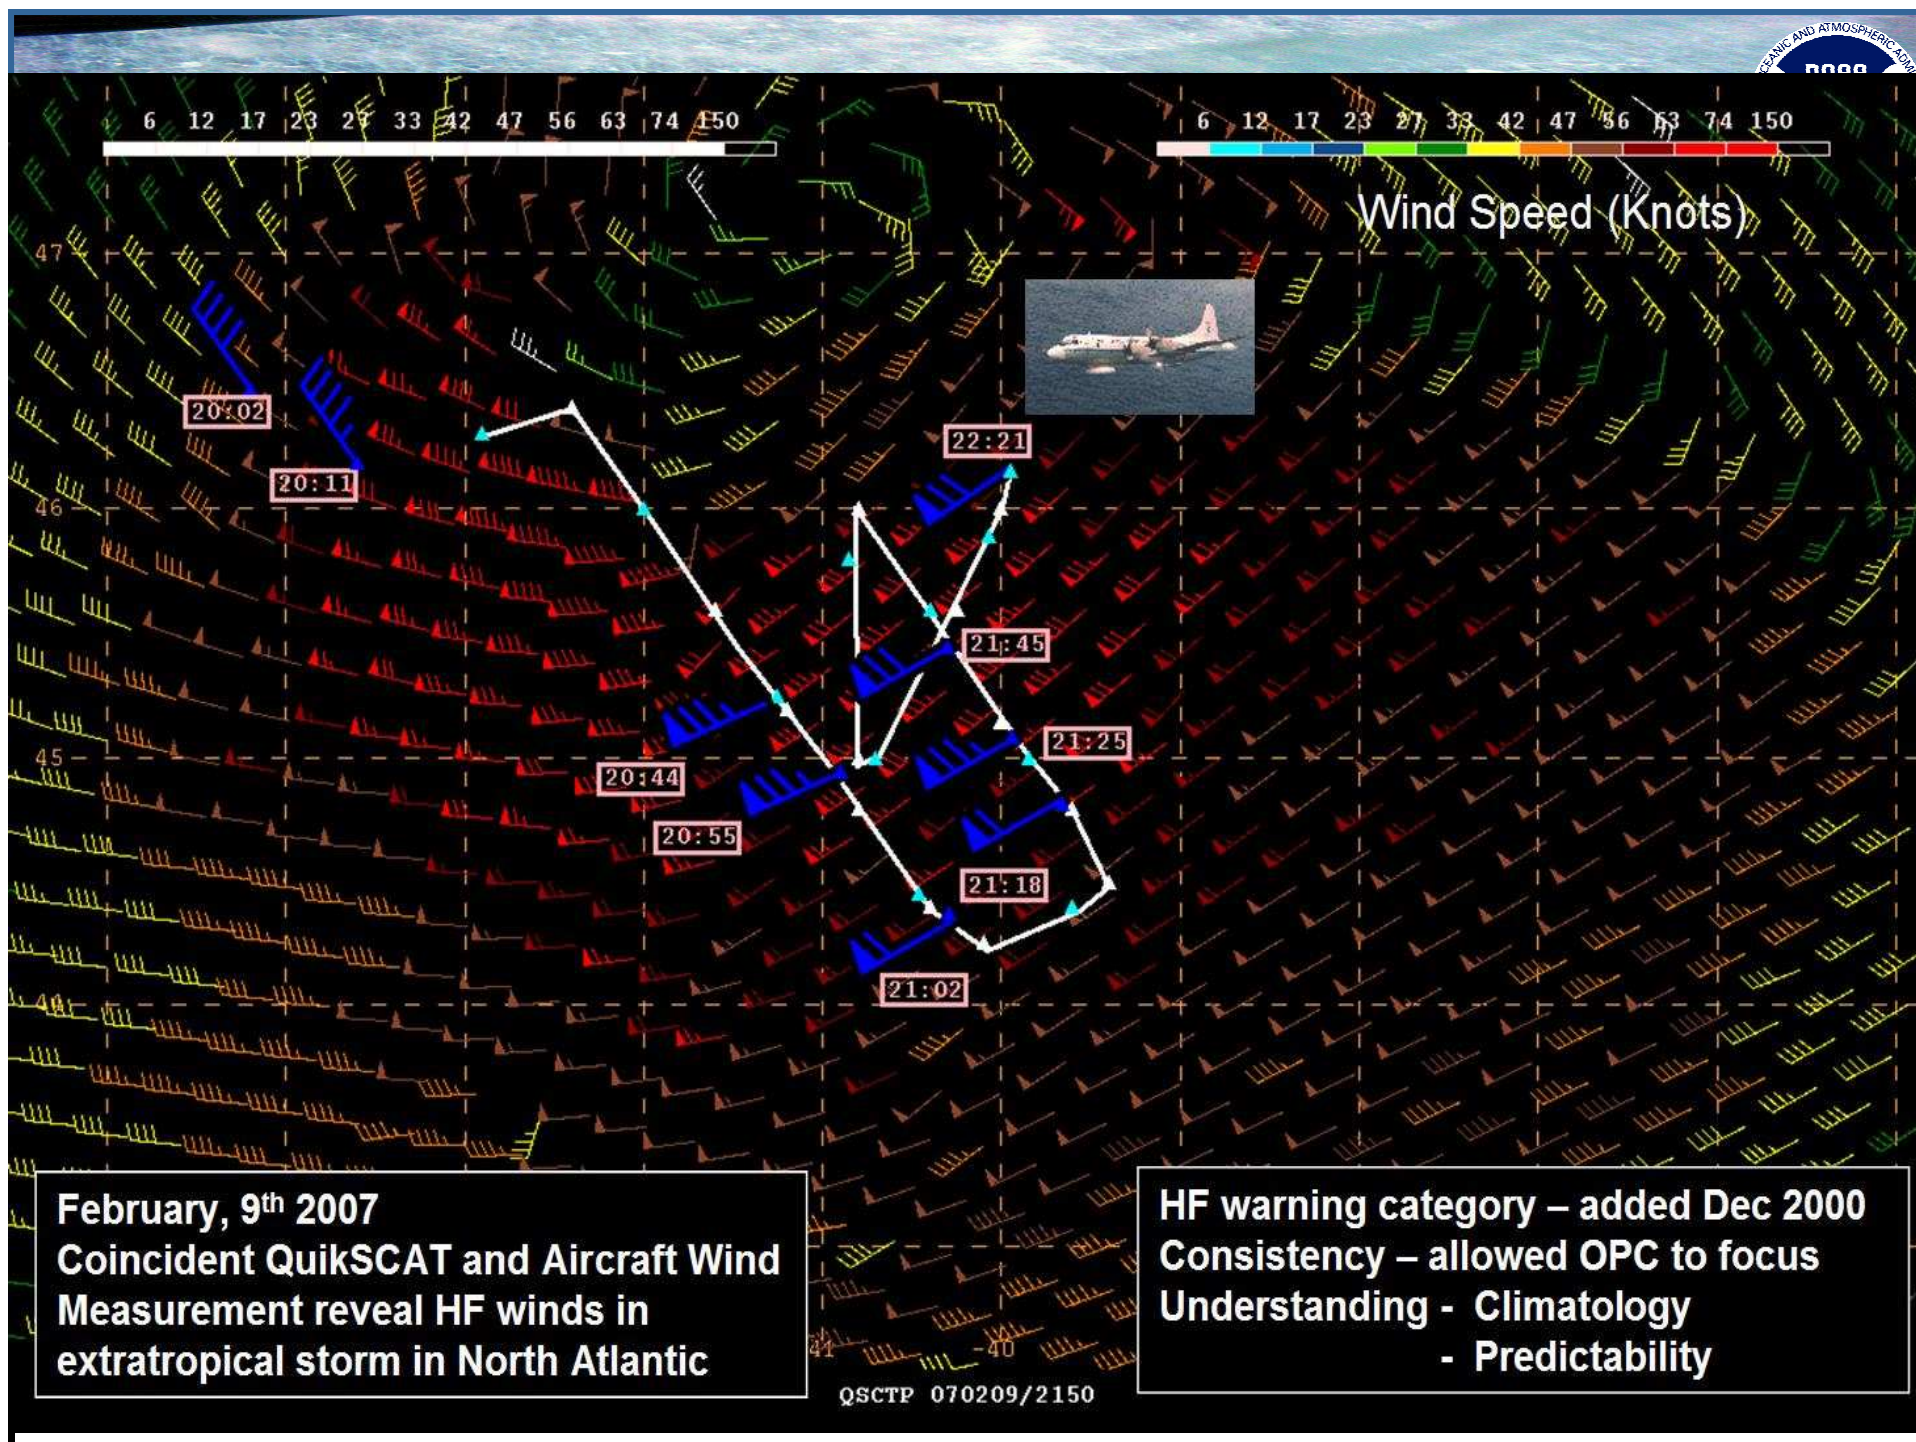

# What can be done and Should something be done and Can we reach an agreement on how to do it?

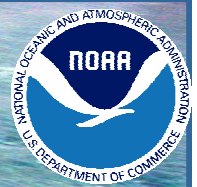

- What wind products do we want to produce?
  - Peak winds? If QuikSCAT/ASCAT/WindSat/AMSR can really measure them do we need XOVWM?
- What changes in processing of measurements might lead to higher wind retrievals?
  - Model function, data averaging, implemented retrieval scheme or measurement technique limitations?
- Calibrating high wind model function
  - Calibration should be consistent with resolution of phenomena being measured
  - Data sets used for model function development should be of comparable resolution with measurement resolution
  - Wind products with comparable resolution should produce comparable winds

# **Extratropical Storms and Possible Hi Wind data sets**

# Winter 2007 NOAA-P3 Field Campaign

- Seven missions flown sampling wind speeds in the range of 5 to 50 m/s (virtually rain-free conditions).
- The dataset includes GPS dropsondes and collocated radiometer (SFMR) brightness temperatures measurements providing surface wind speed and precipitation estimates.
