

# SAR Wind Field Retrieval with Respect to Tropical Cyclones

28.00°

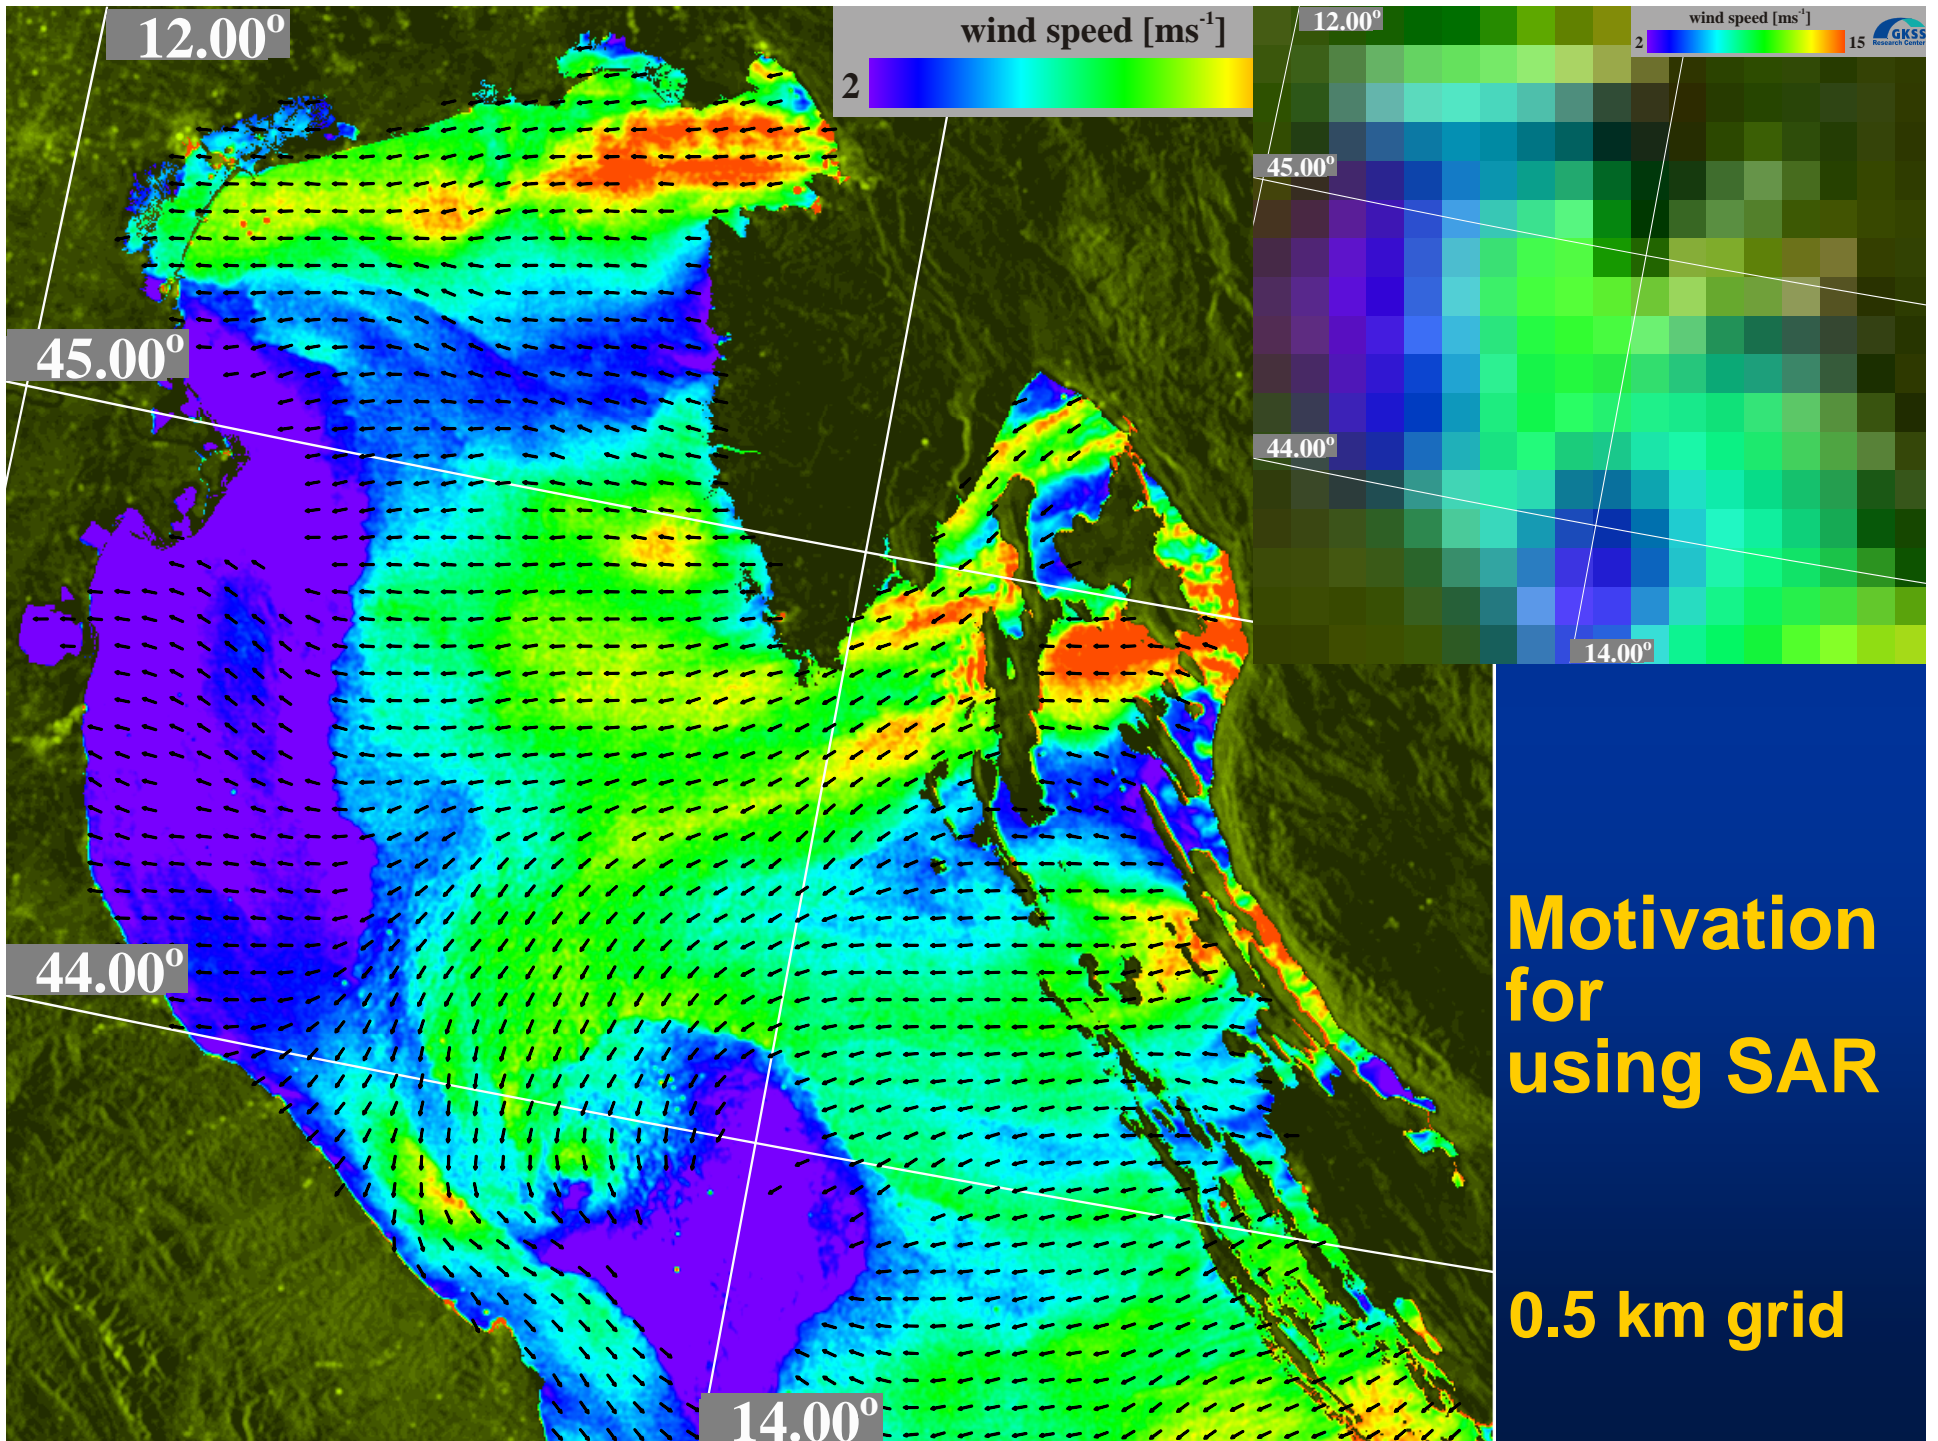

**Jochen Horstmann and Silvia Falchetti**

NATO Undersea Research Center, Italy

GENERAL DYNAMICS  
Information Technology

**Motivation  
for  
using SAR**

**0.5 km grid**

# General Approach for Ocean SAR Wind Field Retrieval (WiSAR)

## Local Gradient Method

### Binomial filter

2 dim.  $B^2$  Filter

2 dim.  $B^4$  Filter

### Optimized Sobel-Filter

3	0	-3
10	0	-10
3	0	-3

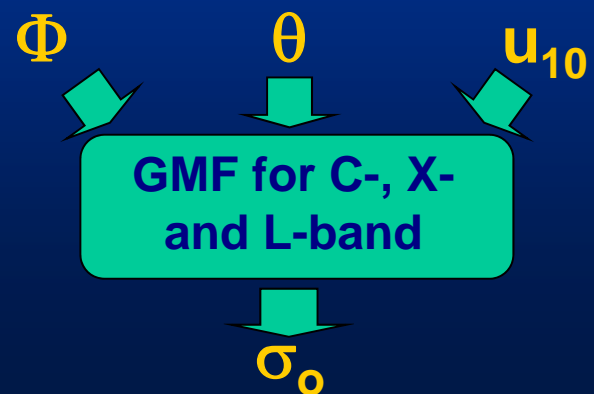

3	10	3
0	0	0
-3	-10	-3

## Geophysical Model Function

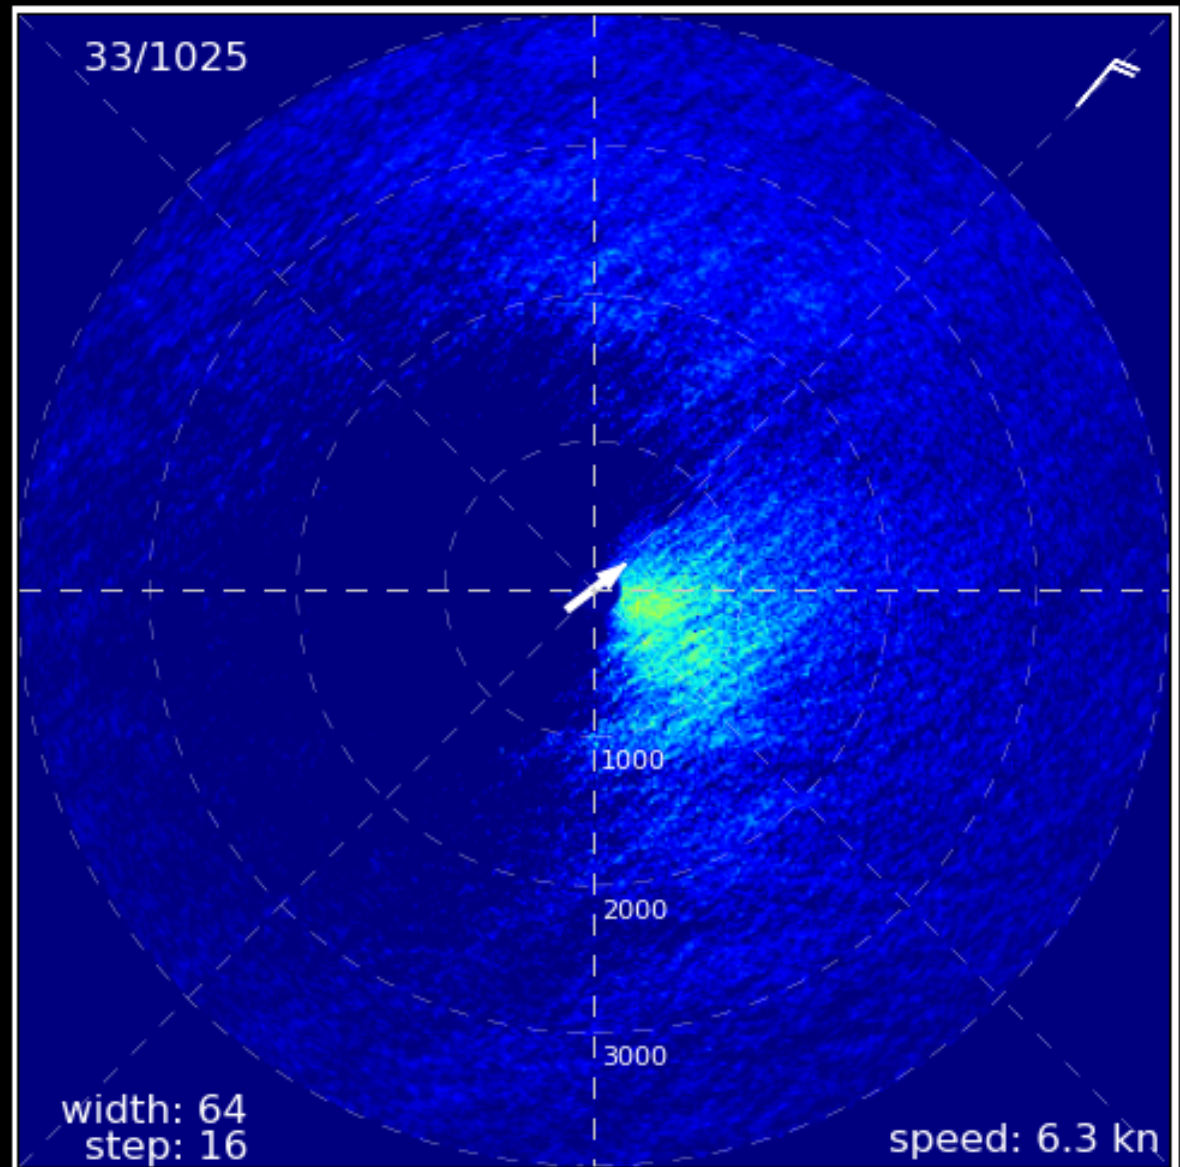

$$\sigma_0^{pol} = a(\theta)u^{\gamma(\theta)} [1 + b(\theta)\cos\phi + c(\theta)\cos(2\phi)]$$

# Surface Streaks Imaged by X-band Marine Radar

**160 sec mean NRCS  
with 30 sec time step**

# General Approach for Ocean SAR Wind Field Retrieval (WiSAR)

## Local Gradient Method

# Flagging of Land and Non Wind Induced Areas

# Wind Direction Ambiguity Removal

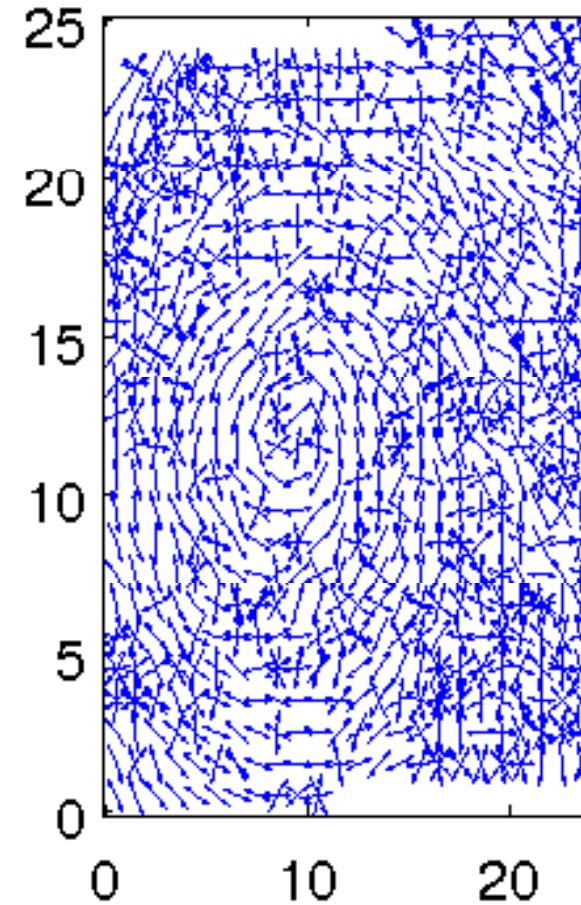

scale 100

scale 200

scale 400

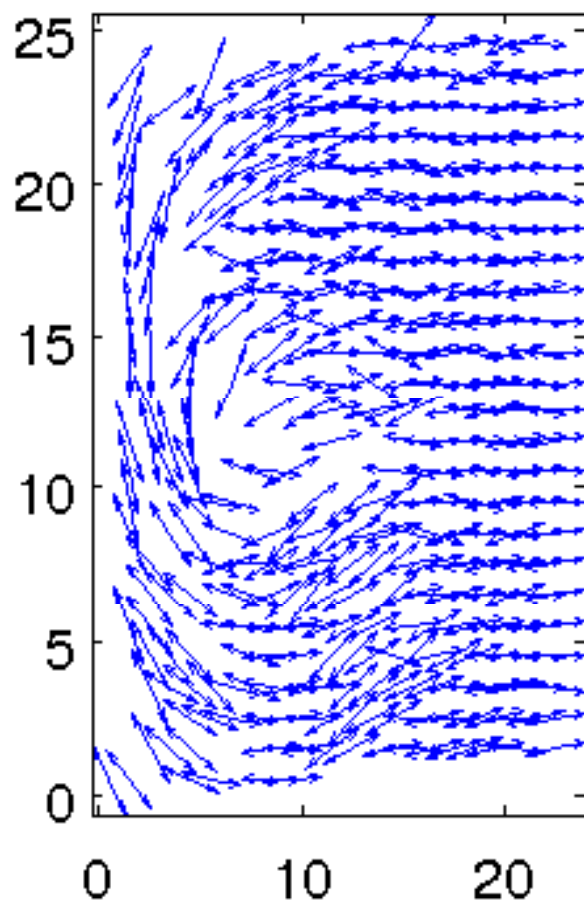

# Wind Direction Ambiguity Removal

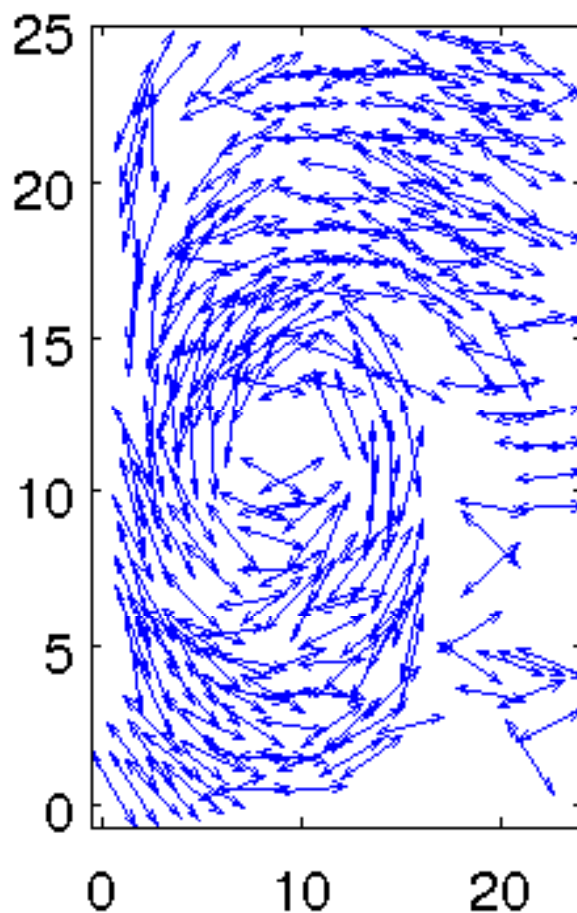

1. Select grids with only one wind direction (400m)

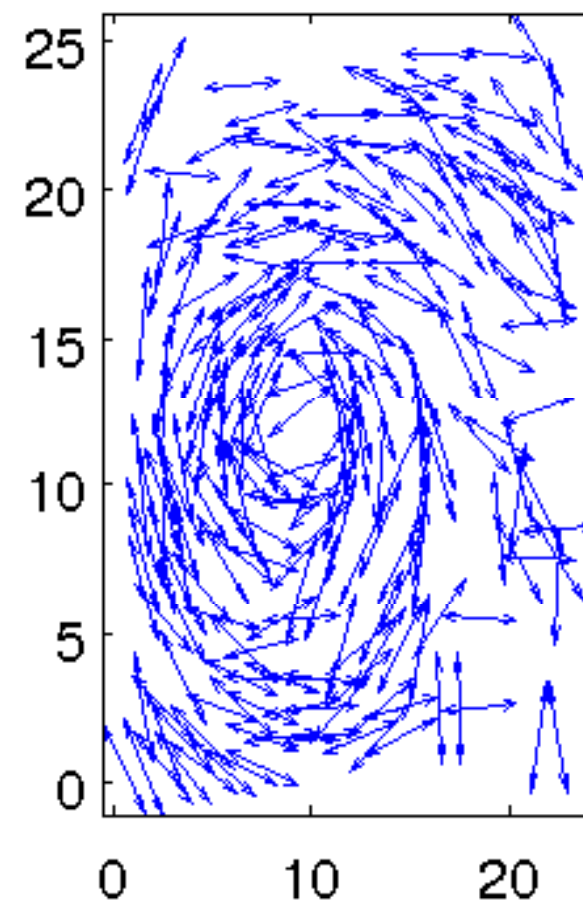

scale 100

scale 200

scale 400

# Wind Direction Ambiguity Removal

## 2. Select nearest neighbor for the other wind directions

# Wind Direction Ambiguity Removal

- 3. Polar wind directions around hypothetical eye with 180 deg ambiguity
- 4. Limit radius around the eye

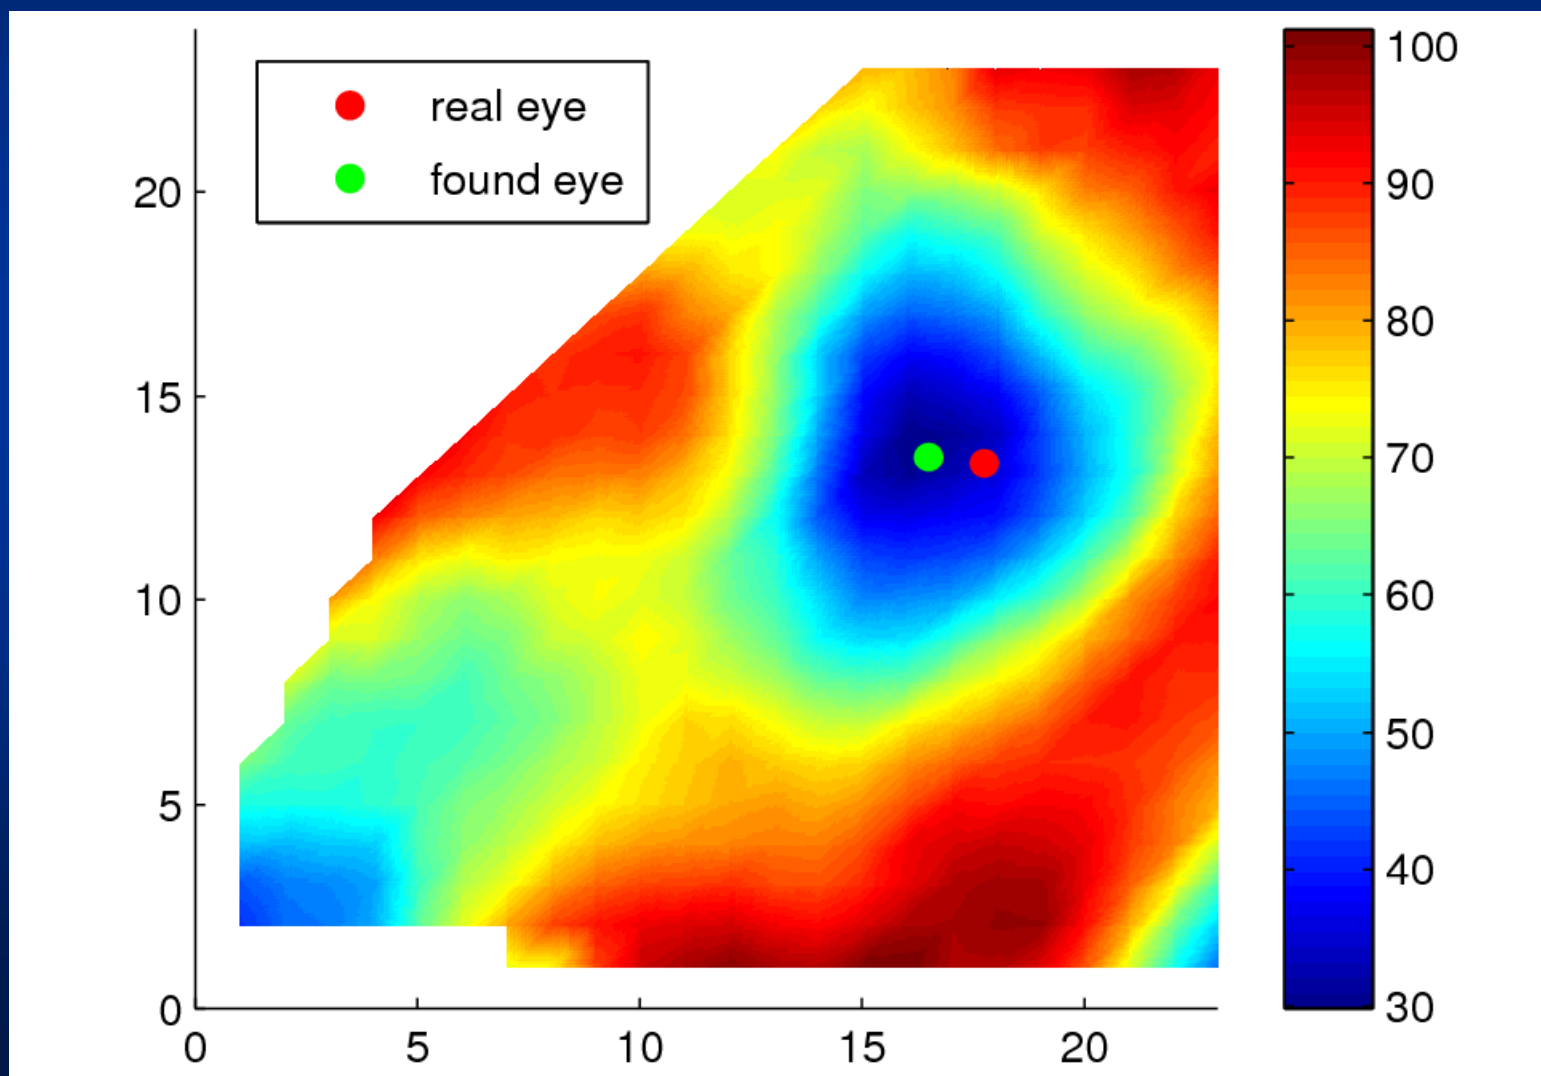

# Wind Direction Ambiguity Removal

## 5. Retrieve 60% quantile of simulated polar wind - 400 m grid wind

# Wind Direction Ambiguity Removal

6. Use eye location and polar wind to remove 180 deg ambiguity and wind directions with difference above 60 deg

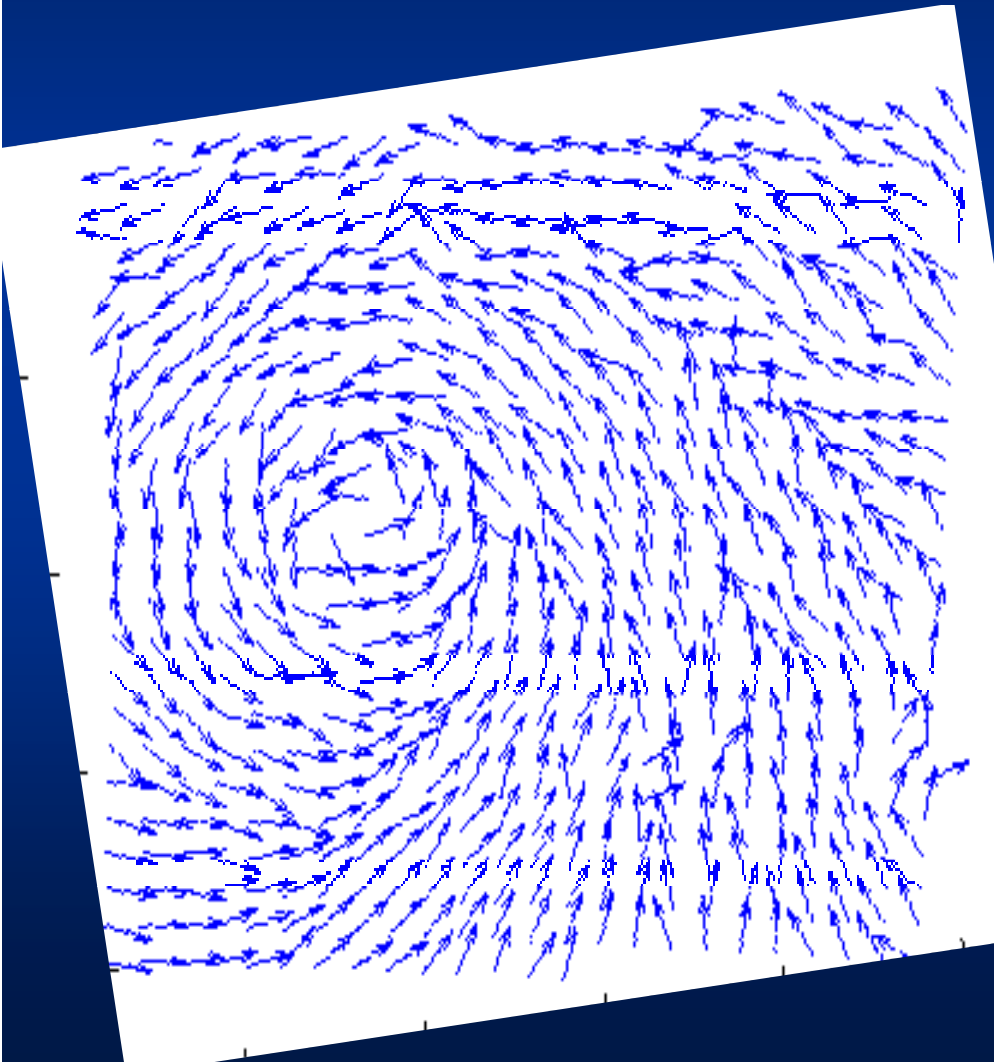

# Wind Direction Ambiguity Removal

7. Select nearest neighbor of all scales to previously selected wind directions
8. Smooth wind directions

# Estimation of uncertainties

# Estimation of uncertainties

**uncertainty of NRCS (0.5 dB) > 2 m/s or 20%**

# Different C-band GMF

**CMOD5**  
(empirical + polarization ratio)

**CWaR**  
(scattering model + fit to data)

# Different C-band GMF

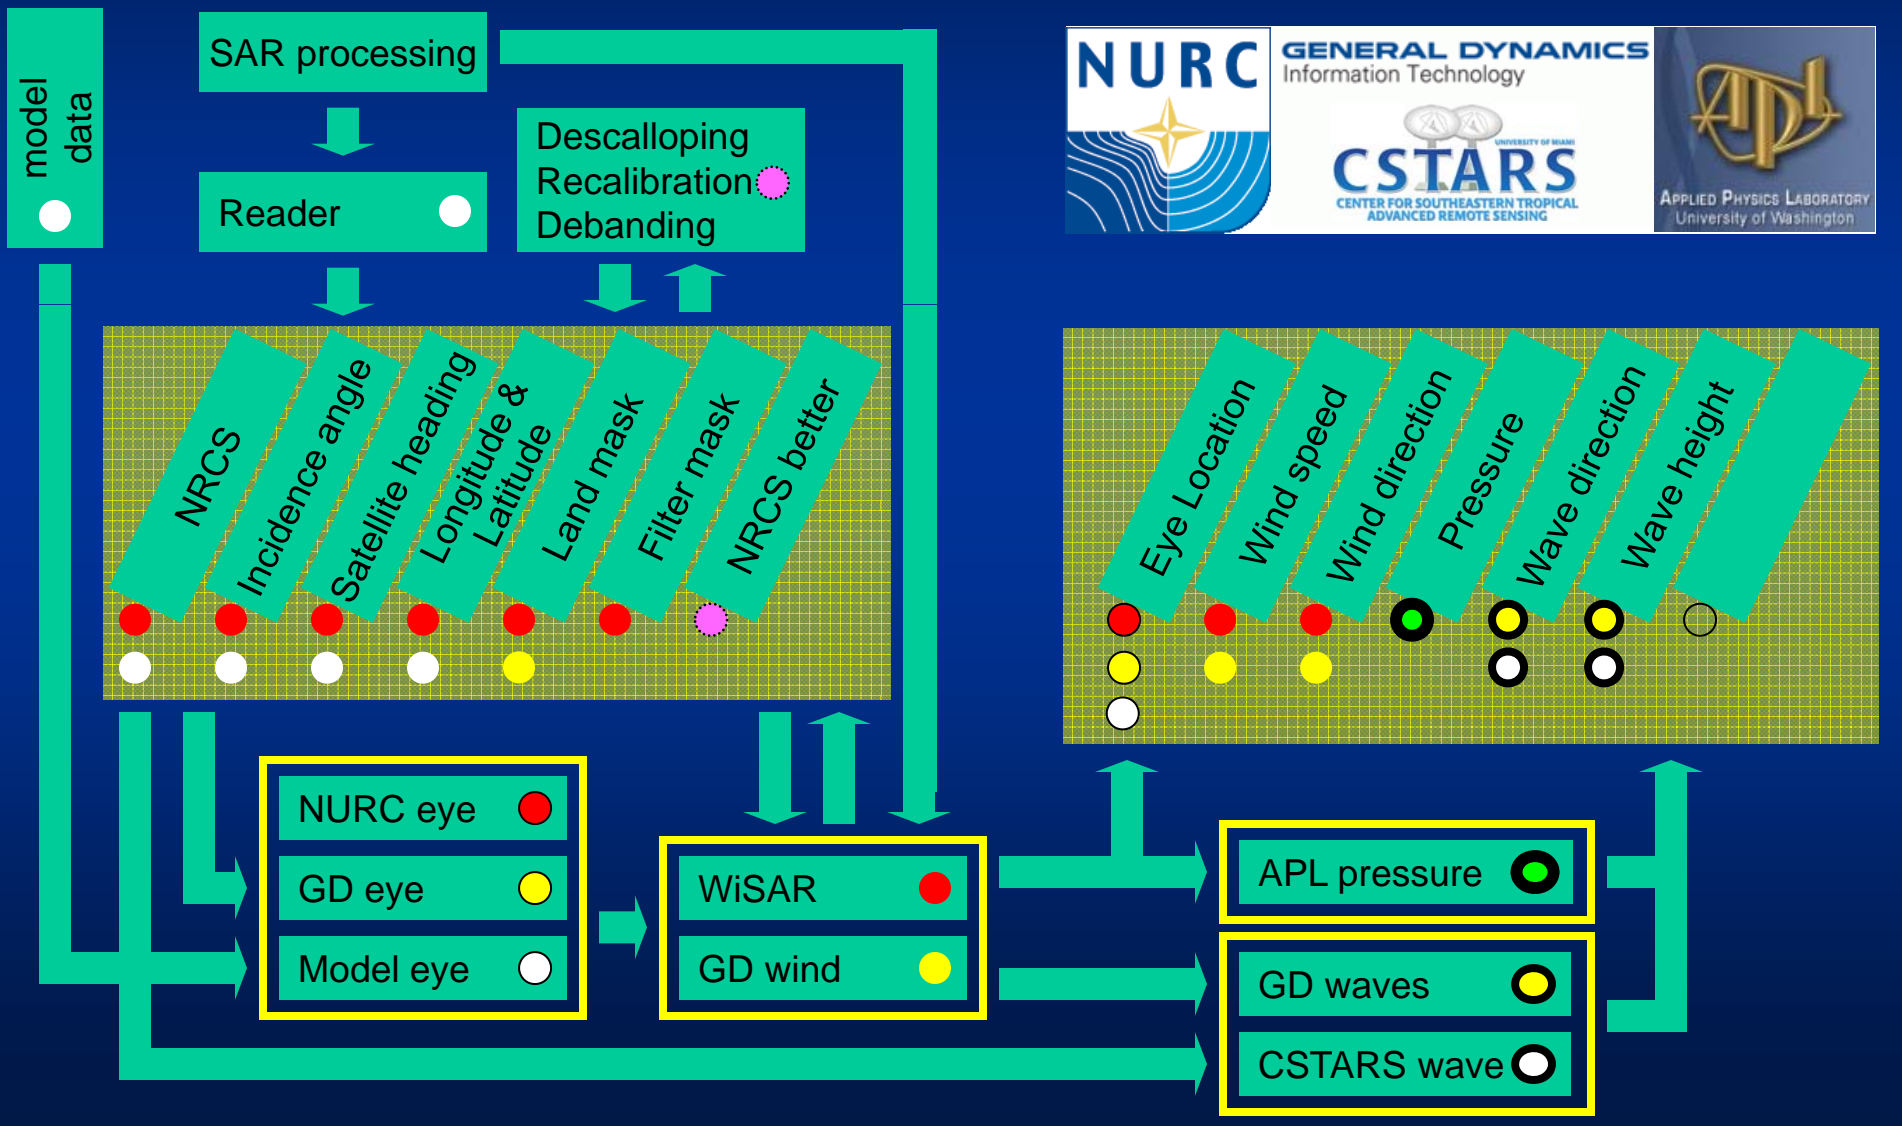

**CMOD5**  
(empirical + polarization ratio)

**CWaR**  
(scattering model + fit to data)

# SAR Typhoon Processing System within the ITOP Project of ONR

# Summary and Outlook

- corrections schemes for:
  - Recalibration
  - banding
  - scalloping
- Typhoon eye detection via
  - wind directions
  - wind speeds
  - correlation
  - wind direction
- choice of Polratio is still an open question
- Correction of areas with NRCS beyond definition of Cmod5
- Removal of wind speed ambiguities (Cmod5)
- Uncertainty estimates with respect to NRCS

# Wind Speed Ambiguities in CMOD5

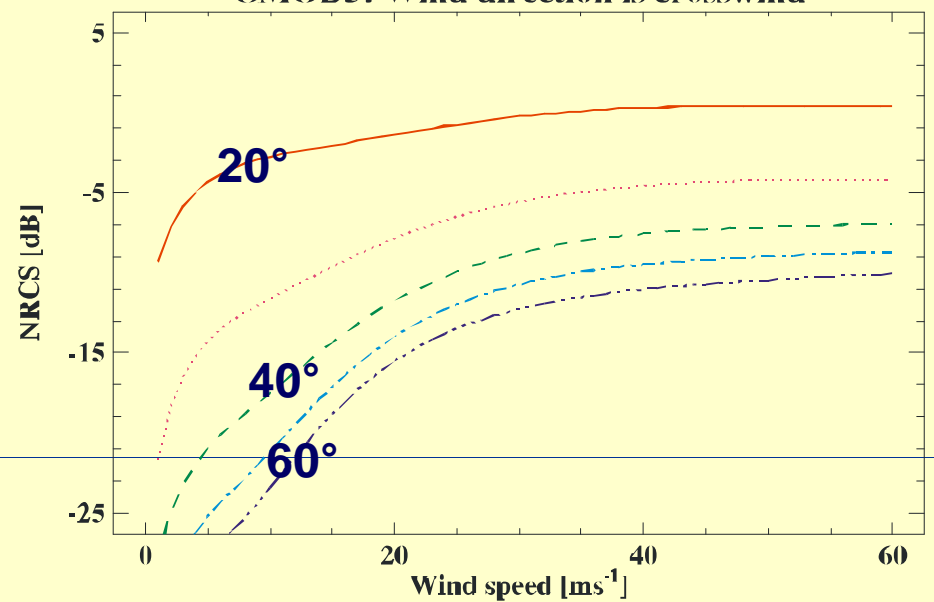

# Wind Speed Ambiguities in CMOD5

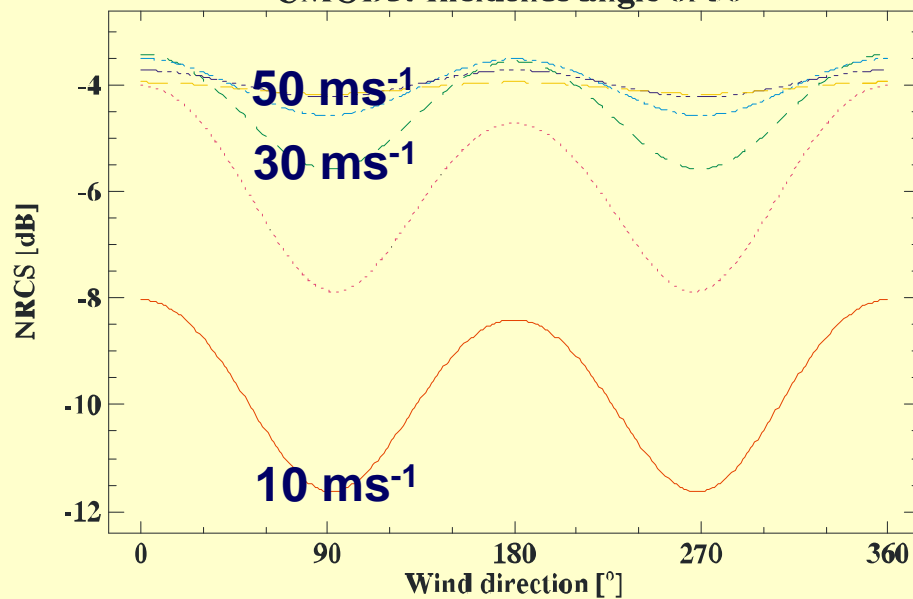

CMOD5: Wind direction is upwind

CMOD5: Wind direction is crosswind

CMOD5: Incidence angle of  $30^\circ$

CMOD5: Incidence angle of  $50^\circ$

# Simulated Effect of Wind Speed Ambiguities

**Hwind + SAR**

**Upper solution**

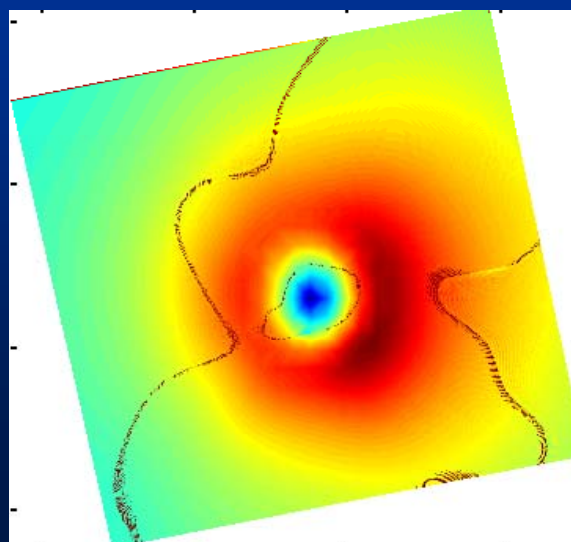

**Lower solution**

**Cluster-Mask**

**Rebuilt Wind**
