Outline

- Comparison of OSCAT wind vectors with data from ocean buoys
- Assessment of statistical distributions of OSCAT wind speeds and directions
 - Global wind speed histograms
 - Directional distributions relative to antenna beams

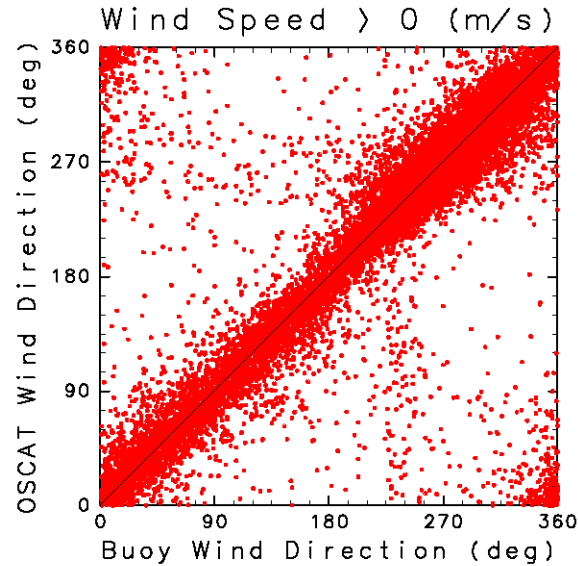

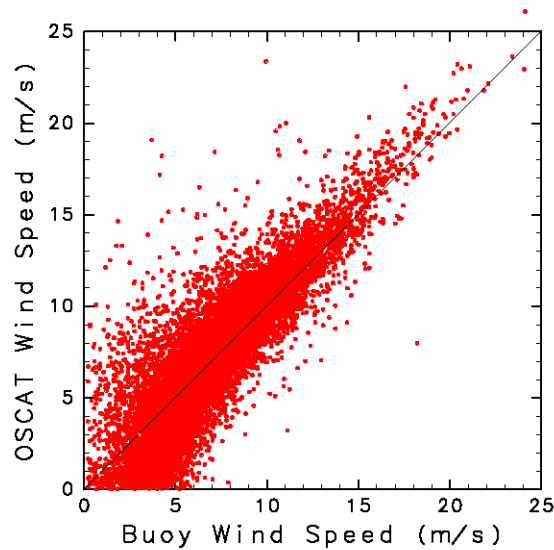

Buoy Data for Comparison with OSCAT

- Data Period
 - From 1 Jan. 2011 to 31 Mar. 2012
- Collocation
 - $\Delta r < 12.5$ km, $\Delta t < 10$ min.
- Height and Stability Collections
 - Liu and Tang (1996) Code
 - 10-m height Equivalent Neutral Wind Speed

Calculation of Global Statistics of OSCAT Wind Speeds and Directions

- OSCAT 25 km Swath Products (L2)
- 1 Jan. 2011 – 31 Dec. 2011 (1 year)
- Global ocean, 60°S – 60°N
- Collocated ERA-interim winds (Non-EN wind)
- 51 million data points

Summary

- OSCAT wind speeds and directions agrees with buoy observations in general.
- However, OSCAT underestimate the wind speed at low wind speed, and overestimate at high wind speed.
- OSCAT global wind speed histogram exhibits excess of very low wind speed data.
- Differences of wind speed histograms with the WVC location, ascending/descending paths, and right/left swaths, found in the previous versions have been reduced significantly.
- Directivity relative to the antenna beams is very significant for OSCAT wind directions.
