#### GCOM Science Overview

IOVWST 2014 IFREMER, Brest, France June 3, 2014 Haruhisa Shimoda, Keiji Imaoka, Hiroshi Murakami Taikan Oki, Yoshiaki Honda EORC, JAXA

#### Background

- Minister of MEXT committed at Earth
  Observation Summit on Apr. 2004
  - Global Warming, Carbon Cycle
  - Climate Change, Water Cycle
  - Disaster mitigation
- Future Earth Observation system must reflect
  - Reliability
  - Continuity
  - User oriented
  - "Stable and continuous social infrastructure"
  - **Contribution to GEOSS**

Council for Science and Technology Policy (CSTP)

- 3rd Science and Technology Basic Plan
- Total budget of \$240B in 5 years
- Strategic fields : Environment, Life science, Information/communication, Nanotechnology
- Ocean-Earth Observation Exploration System
- One of the 5 national critical technology

#### **GEOSS 10 year implementation plan**

#### JAXA's Long-Term Plan of Earth Observation

#### JAXA Future Environment Missions

- ① GCOM-C: Long-term observation of the horizontal distribution of aerosol, cloud, and ecosystem CO<sub>2</sub> absorption and discharge
- ② GCOM-W: Long-term observation of water-cycle such as the snow/ice coverage, water vapor, and SST
- 3 GOSAT: Observation of distribution and flux of the atmospheric greenhouse gases, CO<sub>2</sub> and CH<sub>4</sub>
- ④ EarthCARE/CPR: Observation of vertical structure of clouds and aerosols
- **(5)** GPM/DPR: Accurate and frequent observation of precipitation with active and passive sensors
- 6 ALOS: Fine resolution mapping by optical and SAR instruments

# **GCOM** Mission

- Continuation of ADEOS II
- Contribution to GEOSS
- Climate, Weather, Water, Ecosystem, Agriculture, etc. in GEOSS 9 areas
- Focus on Climate change / Global warming and Water cycle committed in Summit
- Contribution to operational fields like weather forecast, fisheries, etc.
- Long term continuous measurements

# **Scientific Targets**

- Accurate estimation of aerosol radiative forcing
- Validation of climate models
- Accurate estimation of primary production
- Better understanding of coastal phenomena
- Better understanding of sea ice trend

#### **GCOM Observation Targets**

# **Operational Applications**

- Input to NWP
- Extreme weather forecasting
- Fisheries
- Navigation
- Coastal management
- Crop yield estimation
- Monitoring forest decrease
- Monitoring volcano eruptions
- Monitoring forest fire

# **GCOM** satellites

- GCOM-W1
  - AMSR2 (Advanced Microwave Scanning Radiometer 2)
  - Launched on 18, May., 2012
- GCOM-C1
  - SGLI (Second generation Global Imager)
  - Planned to be launched in fiscal 2016
- Plan for the 2<sup>nd</sup> and 3<sup>rd</sup> generations
  - GCOM-W2 (in 2019),
    GCOM-W3 (in 2024)
  - GCOM-C2 (in 2020),
    GCOM-C3 (in 2024)

# GCOM-W1 Launch

- GCOM-W1 was launched at 1:39, 18, May, 2012.
- GCOM-W1 was accurately put into the orbit.
- GCOM-W1 finished its critical phase including AMSR2 rotation at 4rpm.
- GCOM-W1 was put into A-train orbit on 1, July.
- AMSR2 has been operational from 6, July.
- AMSR-E is rotating from Dec. 2012 at 2rpm for cross calibration.

# GCOM-W1 "SHIZUKU" was successfully launched on May 18, 2012 (JST).

# GCOM-W1

- Orbit
  - Sun synchronous orbit
  - Height: about 700km
  - Local time of ascending node: 13:30
- Weight: about 1.99t
- Power : about 3.9kW
- Lifetime: 5 years
- Data transmission
  - Global observation data are stored and transmitted every orbit period
  - Observed data are transmitted to ground stations in real time

# Gene A-Train and GCOM-W1

- After invitation to A-Train constellation from NASA, JAXA and A-Train members studied the possibility of participation of GCOM-W1 to A-Train.
- Participation of GCOM-W1 to A-Train was approved by A-Train members last October. The position of GCOM-W1 is ahead of Aqua.
- Benefits of joining the A-train are:
  - Precise inter-calibration between AMSR-E and AMSR2; and
  - Synergy with A-Train instruments for new Earth science research.

# Downlink

- Freq : 8245MHz
- Polarization : RHCP
- Modulation : OQPSK
- Data Rate : 10Mbps (20Msps)
- Coding : CCSDS, Reed-Solomon, convolution

#### CCOM\_\/1 catellite

#### GCOM-W (Water)

Instrument	Advanced Microwave Scanning Radiometer-2
Orbit	Sun Synchronous orbit Altitude:699.6km (over the equator)
Size	5.1m (X) * 17.5m (Y) * 3.4m (Z)
Mass	1880kg
Power	Over 4050W
Launch	JFY2011 (CY2012 Winter)
Design Life	5-years
Status	Preliminary Design started in JFY2007

- GCOM-W1/AMSR2 will contribute to long-term observation of global water and energy cycle.
- Continue AMSR-E observation (high spatial resolution, low-frequency channels, etc.).
- Construct reliable long-term dataset to contribute for understanding and monitoring of climate change.
- Contribute to operational use by providing continuous cloud-through SST, frequent and quantitative storm observation to maintain precipitation forecast accuracy.

### Basic requirements for AMSR 2

- Minimum modifications from AMSR on ADEOS-II to reduce risks/cost and keep the earliest launch date.
- Several essential improvements.
  - Improvement of calibration system including warm load calibration target.
  - Consideration to C-band radio frequency interference (RFI).

# Basic requirements for AMSR 2

- Antenna : 2.0m, offset parabolic antenna
- Channel sets
  - Identical to AMSR-E (no O<sub>2</sub> band channels)
  - 6.925,7.3, 10.65, 18.7, 23.8, 36.5, 89.0GHz
  - Dual polarization
- Calibration
  - Improvements of hot load etc.
  - Enhance pre-launch calibration testing
- Orbit
  - A-Train
- Mission life
  - 5 years

### Improvement of hot load

- Adoption of temperature controlled reflector over hot load
- Minimize the effect of thermal interference
- Design results shows the maximum temperature difference less than 2K
- Brightness temperature accuracy will be around 0.1K

# Prototyping and testing

Calibration Assembly

MPU testing board

#### Improvement of HTS(Hot Load)

- (1) Temperature inside HTS is kept constant (= 20 degrees C) using heaters on 5 walls of HTS and TCP.
- (2) Sunshields attached to HTS and TCP minimize the sun light reflection into HTS.
- (3) TCP thermally isolates HTS from SU structure (much colder than HTS).

HTS: High Temperature noise Source, TCP: Thermal Control Panel, SU: Sensor Unit

Maximum temperature difference inside HTS : less than 2K
 Estimated brightness temperature accuracy :

- 0.2 K (Variable bias during orbit, season, design life)
- 0.1 K (Random due to quantization)

### **Temperature Resolution**

Frequency	Resolution(target)
6.925	<0.34(0.3)
7.3	<0.43
10.65	< 0.7(0.6)
18.7	< 0.7(0.6)
23.8	< 0.6(0.55)
36.5	< 0.7(0.65)
89.0	< 1.2(1.1)

# Overview of AMSR2 Deployable main reflector system with 2.0m diameter.

Deployed

Stowed

- Frequency channel set is identical to that of AMSR-E except 7.3GHz channel for RFI mitigation.
- Two-point external calibration with the improved HTS (hotload).
- Deep-space maneuver will be considered to check the consistency between main

				<u> </u>	flector and LSIV	-

#### **On-Orbit Radiometer Sensitivity**

#### All channels meet the requirements of radiometer sensitivity.

Radiometer sensitivities were computed as follows.

- Use center 2-points among 16-points (4-points among 32-points for 89GHz) and consecutive 10-scans (in total, 2\*10=20 samples for lower frequencies, 4\*10=40 samples for 89GHz) to compute standard deviation of radiometer counts, and then convert to temperature scale.
- Compute radiometer sensitivities for HTS (approx. 290K) and CSM (approx. 3K) temperatures, and then interpolate those values to derive radiometer sensitivities at150K temperature.
- Average those instantaneous values during the period indicated in the chart.

## **Cross Calibration with AMSR-E**

- AMSR-E is now rotating at 2rpm.
- AMSR-E and AMSR2 will remain in A-train at least 1 year.
- Cross calibration will be conducted during this 1 year period.
- New calibration parameters of AMSR-E will be determined.
- The whole AMSR-E products will be reprocessed using this new parameters.

#### **Direct comparison with AMSR-E**

- Orbits and frequency channel sets are almost identical: no corrections are needed for center frequency, incidence angle, and observing local time. It enables cross calibration in wide range of Tbs over land, ice, and ocean.
- AMSR-E observations resumed from December 4, 2012 with 2rpm rotation speed. Geolocation and Tbs are computed by modified software.
- Observation is sparse, but reasonable for global-scale comparison.
- Calibration improvement of 2rpm mode data is underway.

#### AMSR2 23V Descending

# Global Rainfall Map in Near Real Time

- Displaying global rainfall map merging TRMM. AMSR-E and other satellite information
- Available 4-hr after observation
- Browse images, 24-hr animation, displaying by Google Earth
- 0.1-degree lat/lon grid, hourly products
- Data are also available via password protected ftp site
- Based on JST/CREST GSMaP algorithm

Because of limited use permission for Meteosat cloud images, we only display images of them at 00, 06, 12 and 18 UTC in this page. <u>TO DEPLAY ALL Meteosat IMAGES (example)</u>, please make registration (It's free and easy!). If you want to display images before 20UTC 2 June 2008, you need registration too (images after 6UTC 22 October 2007 are available from Full cloud image version).

Please make user registartion from below

15

# AMSR2 Status

- Extremely stable.
- Contributed to the ECMWF NWP model improvement(Kazumori).
- New version L1B will be released in this year (non-linearity correction).
- AMSR-E reprocessing is planned (just algorithm improvement)

### **GCOM-C Science Targets**

#### Radiation budget of the atmosphere-surface system

Today's the most significant factor: atmospheric CO2

Monitoring and process investigation about cloud and aerosol by GCOM-C & EarthCARE

Figure 2.4. Global average radiative forcing (RF) in 2005 (best estimates and 5 to 95% uncertainty ranges) with respect to 1750 for CO<sub>2</sub>, CH<sub>2</sub>, N<sub>2</sub>O and other important agents and mechanisms, together with the typical geographical estent (spatial acade) of the forcing and the assessed level of scientific understanding (LOSU). Aerosola from explosive volcanic eruptions contribute an additional episodic cooling term for a law years following an eruption. The range for Inser contraits does not include other possible effects of aviation on cloudiness. (WGI Figure SPM 2)

Evaluation of model outputs and process parameterization

#### **Climate models**

present and future cloud and aerosol roles in the global warming scenarios

Today's the most significant <u>uncertainty</u> of radiative forcing is direct/indirect role of cloudaerosol system

# CGOM-C1

- Orbit
  - Sun synchronous orbit
  - Height: about 800km
  - Local time of descending node: 10:30
- Weight: about 2.1t
- Power : about 4kW
- Lifetime: 5 years
- Data transmission
  - Global observation data are stored and transmitted every orbit period
  - Observed data over Japanese islands are transmitted to JAXA ground station in real time

# SGLI

- Wide spectrum coverage
- Near UV, VIS, NIR, SWIR, TIR
- Polarization measurements
- Multiple angle observation
- Multiple telescopes

### VNR

- Composed of 3 telescopes to cover the total swath
- Each telescope covers 24 degree achieving 70 degree in total

# Polarization

- Composed of 1 telescope for each channel
- IFOV is 55 degree
- Looking fore, nadir & aft
- One camera with tilt or two cameras?

### 250m OCE MRGB:22/21/20, 2003.5.26

### 3. Examples of expected GCOM-C product

- 3.4 VNR 250m land and coastal observation

250m Ocean color chlorophyll-a and NDVI simulated using GLI 250m channels

(a) GLI 1km Osaka Bay (1 Oct. 2003, CHL by LCI)

(b) GLI 250m Osaka Bay (1 Oct. 2003, CHL by LCI)

# SGLI 250m resolution will enable to detect more fine structure in the coastal area such as river outflow, regional blooms, and small current.

Hiroshi Murakami, Mitsuhiro Toratani and Hajime Fukushima, **Satellite ocean color observation with 250 m spatial resolution using ADEOS-II GLI**, Remote Sensing of the Marine Environment, Proceedings of SPIE, Volume 6406-05, Nov. 28, 2006 100

0.3

#### 3. Examples of expected GCOM-C product

- 3.3 VNR 250m land cover classification

• SGLI's 250m channels (11CHs from 380nm to 1640nm) and once/2-day observation and can improve the land cover classification.

Classification to 25 class (IGBP: International Geosphere-Biosphere Program) using GLI 39 scenes (2003/04~2003/10) (provided by Dr. Nguyen Dinh Duong, VAST(Vietnamese Academy of Science and Technology)

#### **3. Examples of expected GCOM-C product** - 3.5 Thermal infrared 500m land and coastal observation

- The 500m and 1000m spatial resolution thermal infrared images are simulated using ASTER data (original resolution is 90m) (Tokyo Bay in the night on August 4, 2003).
- SGLI 500m-resolution thermal infrared channels will enable detection of fine structures such as land and coastal surface temperature influenced by the city and the river flows.

### Examples of expected GCOM-C product

- 6. Land aerosol by Near-UV and polarization

Near-UV aerosol

Global aerosol optical thickness in June 2003 using the GLI Near-UV (380nm) channel (NIR is used for the ocean area) Polarization aerosol

AOT June 2003 using POLDER-2

Global aerosol optical thickness in June 2003 using POLDER-2 polarization reflectance

- Not only over the ocean, SGLI will estimate land-area aerosols using near-UV (380nm) and polarization channels which are more sensitive to atmosphere scattering rather than land surface reflection.
- Combination of aerosol absorption by Near-UV and fine-mode aerosol properties by polarization.

#### Examples of expected GCOM-C product

- 9. Marine resource monitoring and management

The fisheries of skipjack and tuna, warm-water migratory fish, appear to be influenced by the Kuroshio warm current and its extensions offshore Sanriku.

### Recent status of GCOM-C1

- GCOM-C1 finished CDR.
- Component PQR is on-going.

### **Research Announcements**

- First RA for GCOM-W1 was issued on Jan. 2008.
- 35 PIs were selected.
- First GCOM Symposium/Workshop was held on 13-15, Jan. 2009 in Yokohama.
- First GCOM-C1 RA was issued on January, 2009. 28 PIs were selected.
- PI workshop including GPM & EarthCare PIs was held on Jan., 2013.
- PIs of Second W1 RA were selected.

### **International Cooperation**

- Discussions on the cooperation with JPSS is underway with NOAA
- JAXA is proposing a joint science activity with NASA
- Provision of a scatterometer on GCOM-W2 is under discussion with JPL, NASA and ISRO.

### New Scatterometer on GCOM-W2

- Dual Frequency Scatterometer (DFS)
- Ku band and Ka band
- around 2m aperture
- High resolution wind fields measurements
## AMSR3 on GCOM-W2

- Addition of scatterometer
- Addition of high frequency channels (150-190GHz) for solid precipitation and water vapor sounding
- Also, join the A-train at least 1 year

# GCOM-W2 status

- GPM & ALOS2 were launched.
- GCOM-C1 & EarthCare will be launched on 2016.
- GOSAT-2 will be launched on 2017,
- No program beyond 2017.
- GCOM-W2 program should start next year to assure overlap with W1.

### GCOM-W2 Overview

#### GCOM-W2 Overview

Mission instruments	<ul> <li>Advanced Microwave Scanning Radiometer 3(AMSR3)</li> <li>Dual Frequency Scatterometer (DFS)</li> </ul>
Observation orbit	Sun Synchronous Orbit (A-train orbit) Altitude 699.6km, Inclination 98.186deg
Local sun time	13:30 (ascending)
Dimensions	5.6m(X), 17.6m(Y), 5.2m(Z)
Spacecraft mass	2515kg (BOL)
Generation power	4050W (EOL, two wings)
Launch year and launcher	January 2016 / H-IIA
Design lifetime	Five years

### **GCOM-W2** Configuration

### Conclusions

- AMSR2 will have the highest calibration capability within microwave imager.
- AMSR-E products will be reprocessed after the cross calibration with AMSR2.
- Long term high accuracy microwave imager products will be obtained.

### **Basic Law on Space**

- Basic Law on Space has passed the Parliament last June
- Strategic Headquarters has been established (Minister level)
- All the space activities will go under the Cabinet Office
- Restructuring of JAXA
- Increased budget?
