

New products and applications session discussion

- **Data products** (L2 versus gridded products)
 - Differentiate in terms of applications
 - Sufficient documentation (incl. metadata)?
 - NetCDF CF standards (CF metadata mailing list: <http://www.unidata.ucar.edu/support/index.html#mailinglists>); preferred data format?
 - Advertising current products (RSS, JPL, OSI SAF, etc.) within the user community
 - Uncertainty estimates required (should also be used and documented in the gridded products)
 - Flags versus filtering data
- **Quality control**
 - Different methods; should we converge? (same for coastal processing)
 - Rain contamination
- **High winds**
 - SFMR as calibration standard? (after calibration issues resolved)
 - Assess sensitivities and SNR characteristics of different sensors
- **Other products**
 - L-band winds and sea state parameters
